# Chronologie

--

- **1<sup>er</sup> janvier 2022 : Indiana - Augmentation des Décès - Assurance - Vaccins - Dangers - « Le PDG d'une compagnie d'assurance-vie de l'Indiana constate que les décès ont augmenté de 40 % chez les personnes âgées de 18 à 64 ans » - Le Saker Francophone**

« Le directeur de la compagnie d'assurance OneAmerica, basée à Indianapolis, a déclaré que le taux de mortalité a augmenté de façon stupéfiante, de 40 % par rapport aux niveaux pré-pandémiques chez les personnes en âge de travailler.

« *Nous observons, en ce moment même, les taux de mortalité les plus élevés que nous ayons vus dans l'histoire de notre société – et pas seulement chez OneAmerica* », a déclaré le PDG de la compagnie, Scott Davison, lors d'une conférence de presse en ligne cette semaine. « *Les données sont cohérentes avec tous les acteurs de ce domaine* ». »

« **Le nombre d'hospitalisations dans l'État est maintenant plus élevé qu'avant l'introduction du vaccin COVID-19 il y a un an**, et en fait le plus élevé des cinq dernières années, a déclaré le Dr Lindsay Weaver, médecin-chef de l'Indiana, lors d'une conférence de presse avec le gouverneur Eric Holcomb mercredi. »

- **1<sup>er</sup> janvier 2022 : Remèdes - Vitamines D - Étude - « Association of Vitamin D Status and COVID-19-Related Hospitalization and Mortality » - Karen H. Seal MD, MPH, Daniel Bertenthal MPH, Evan Carey PhD, Carl Grunfeld MD, PhD, Daniel D. Bikle MD, PhD & Chuanyi M. Lu MD**

## « Key Results

Of 4,599 veterans with a positive SARS-CoV-2 test, vitamin D deficiency (< 20 ng/mL) was identified in 665 (14.5%); 964 (21.0%) were hospitalized; and 340 (7.4%) died. After adjusting for all covariates, including race/ethnicity and poverty, there was a significant independent inverse dose-response relationship between increasing continuous 25(OH)D concentrations (from 15 to 60 ng/mL) and decreasing probability of COVID-19-related hospitalization (from 24.1 to 18.7%,  $p=0.009$ ) and mortality (from 10.4 to 5.7%,  $p=0.001$ ). In modeling 25(OH)D as a log-transformed continuous variable, **the greatest risk for hospitalization and death was observed at lower 25(OH)D concentrations.** »

- **4 janvier 2022 : Vaccins - Dangers - Nombre de Morts - Données Officielles - « Govt. data reveals over 946K people suffered injuries or death from COVID-19 vaccinations »**

<https://www.oann.com/govt-data-reveals-over-946k-people-suffered-injuries-or-death-from-covid-19-vaccinations/>

- **4 janvier 2022 : Grippe & Covid - Israël - « La grippe et le Covid en même temps: Israël identifie un cas de "flurona" »**

[https://www.bfmtv.com/sante/la-grippe-et-le-covid-en-meme-temps-israel-identifie-un-cas-de-flurona\\_AN-202201040202.html](https://www.bfmtv.com/sante/la-grippe-et-le-covid-en-meme-temps-israel-identifie-un-cas-de-flurona_AN-202201040202.html)

- **4 janvier 2022 : France - Macron - Emmerder - Violence - Non-Vaccinés - Discrimination - « Covid-19 : Emmanuel Macron a «très envie d'emmerder» les non-vaccinés «jusqu'au bout» »**

« Dans une interview au *Parisien*, le président de la République charge sévèrement les Français qui n'ont encore reçu aucune dose. Cinq millions de personnes qualifiées «d'irresponsables» qui ne sont plus, selon lui, des «citoyens». »

<https://www.lefigaro.fr/elections/presidentielles/covid-19-emmanuel-macron-a-tres-envie-d-emmerder-les-non-vaccines-20220104>

- **4 janvier 2022 : Mortalité Vaccinés/Non-Vaccinés - « Le Pr Norman Fenton met au jour les failles du rapport de mortalité entre vaccinés et non-vaccinés »**

<https://www.mondialisation.ca/le-pr-norman-fenton-met-au-jour-les-failles-du-rapport-de-mortalite-entre-vaccines-et-non-vaccines/5663839>

- **4 janvier 2022 : Vaccins - Dangers - Nombre de Morts - Projections - Dépopulation - Génocide - « An estimated 10 million people PER DAY are set on irreversible countdown to vaccine death that could exterminate BILLIONS if not stopped in the next year » - NaturalNews.com**

« Based on the cancer deaths, myocarditis deaths, autoimmune deaths, heart attack deaths and the increased risks of strokes, neurological disorders and organ failure, we can conservatively conclude that roughly:

- One-third of those who took mRNA covid vaccines will be dead over the next ten years.
- One-third will be injured or debilitated and unlikely to be capable of participating in society in a meaningful way.
- One-third will be relatively unaffected.

Interestingly, this appears to coincide with the statistical analysis of covid vaccine lot numbers, where roughly one-third of the lots are associated with heart attacks and deaths, another third are associated with injuries (but not death), and a final third appear to be harmless (suspected to be saline).

Again, these are rough numbers and there will be disagreement about many of the projections made here, but this is an **early snapshot and projection** based on what we know so far. Obviously, these conclusions are subject to change as new data appear, and the final number by the end of 2032 could be radically different from these projections (far worse or perhaps far better). »

<https://www.naturalnews.com/2022-01-04-10-million-people-per-day-are-set-on-irreversible-countdown-to-vaccine-death.html>

➤ **4 janvier 2022 : Pfizer - Irak - Terrorisme - Tribunal US - « U.S. court revives lawsuit against Pfizer, others on Iraq terrorism funding claims »**

« A U.S. appeals court on Tuesday revived a lawsuit against AstraZeneca Plc (AZN.L), Pfizer Inc (PFE.N) and other companies over allegations their contracts with Iraq's health ministry helped fund terrorism that killed Americans during the war in Iraq. The plaintiffs contend that the militia group Jaysh al-Mahdi, sponsored by Hezbollah, controlled Iraq's health ministry and that the 21 defendant U.S. and European medical equipment and pharmaceutical companies made corrupt payments to obtain medical-supply contracts. »

➤ **4 janvier 2022 : Vaccins - Dangers - Variant Omicron - Risques de Mutations Dangereuses - Appel à l'OMS - « Second call to WHO: Please, don't vaccinate against Omicron » - Par Geert Vanden Bossche - Vidéo**

« It is important to realize that, in fact, Omicron is more or less serving, indeed, as a live attenuated vaccine, and that this is a unique opportunity. *The fact that we free up the sterilizing capacity in the vaccinees, thanks to the increased level of resistance of Omicron to the vaccinal antibodies – those are no longer capable of outcompeting the innate antibodies – we may have a unique opportunity to achieve herd immunity, or to start building herd immunity.* And so, it is very, very important that we leave people alone, and that we leave the children alone, and that we let the virus spread. And so, we shouldn't have any vaccination against this Omicron variant, and we shouldn't have lockdowns.

*If we are now going to vaccinate against Omicron, we are going to take away this window of opportunity for the population to generate herd immunity, thanks to freeing up our innate antibodies. And what we are going to do is in fact we would build against antibodies, against the spike protein of Omicron, and particularly against the receptor-binding domain of this Omicron spike protein.*

We know that this receptor-binding domain has already undergone a number, or several, important mutations. So, *if we put again full pressure on this domain, there is a high likelihood that we are now going to promote variants that will be able to use a receptor that is different from ACE-2 to enter into the cell. And we know that SARS-CoV-2 can do that because it has already been described that SARS-CoV-2 can use receptors other than ACE-2 to enter into the cell.* But so far this way of entering - this alternative way of entry into the cell - has not been the preferred way for the virus for entering the cells. But it would only take probably one or two mutations for the virus to make these alternative receptors the preferred receptors for viral entry.

By doing mass vaccination against Omicron, we may be putting enough immune pressure on viral infectiousness to give variants that

are capable of entering into the cell through an alternative receptor - to give them a competitive advantage, and so, to provide them with a fitness advantage so that they can now become dominant in the population. *What this means is pretty catastrophic, because this would mean that basically we end up with a situation where we have antibodies that still strongly bind to the virus, to the receptor binding domain, but that can no longer neutralize the virus because the virus is now using another domain to enter into the cell, a domain which is different from the domain that is blocked by the antibodies.*

*Such a situation is in fact, a textbook example, for how you provoke antibody-dependent enhancement of the disease. So, this would mean that such a situation, the virus covered with strongly binding antibodies but not being able to neutralize the virus, would basically lead, or would be similar, to a situation where the virus has acquired a higher level of virulence. This would be - this situation would really, really, really be at risk of provoking the kind of disastrous consequences that I have been warning against at the beginning of this year. And we know that industry is already gearing up for mass vaccination against Omicron. And, as this, according to my humble opinion, could potentially be - with a high likelihood - a real disaster. We must prevent such a thing from happening.*

*So in order to - or I would say unless - unless immediate action is taken to prevent this, it is clear that decision-makers in your organization, the WHO, will be held responsible, accountable, and liable for the dramatic consequences that this biological experiment on human beings could possibly entail. So I hope that this time you will take my warning very seriously into consideration. »*

➤ **5 janvier 2022 : Vaccins - Dangers - Myocardites - « More Bad News on COVID Vaccines and Myocarditis in Men Under 40 - Even as More Colleges Require Booster Shots for Students » - Alex Berenson**

*« A huge new study has found the risk of serious heart problems called myocarditis in men under 40 soars with each dose of a Covid mRNA vaccine – and is sharply higher than the risk from a coronavirus infection itself.*

The findings call into sharp question the efforts by American colleges and universities to make their students receive booster shots before returning to school this January – especially since other studies have shown that the risk of post-vaccine myocarditis is concentrated not merely in men under 40 but in those aged 16-25.

**The study, which British researchers released in late December, showed that the risk of myocarditis almost doubled after the first Pfizer shot in men under 40.** Then it doubled again after the second and doubled *again* after the third – to almost eight times the baseline risk.

**For the Moderna vaccine, the risks were even higher, reaching 16-fold after the second shot.** (The risk of a third Moderna shot could not be calculated because too few people received it.)

**Because each Moderna shot contains 100 micrograms of mRNA, while each Pfizer shot contains 30, the findings suggest strongly that the heart risks are dose-related and likely to continue to rise with each additional shot.**

The study also contained some evidence that post-vaccine myocarditis might be more dangerous than other forms of myocarditis. It showed a trend towards higher death rates in people hospitalized for myocarditis after vaccination compared to other myocarditis cases. »

- **6 janvier 2022 : Ivermectine - Remède - Étude - Brésil** - « **Population-wide Observational Study in Brazil: Prophylactic Use of Ivermectin Reduces COVID-19 Mortality, Hospitalization & Infection** »

Présentation de l'étude :

« Kerr and four other medical researchers, two affiliated with Brazilian academic medical centers and one from a Cuban biotech institute were involved in the study of the efficacy of the generic, regulatory approved antiparasitic drug in three different municipalities in Brazil covered by TrialSite back in September 2020. Most recently, Dr. Kerr and

colleagues posted the results of a citywide prevention program using ivermectin, implemented in Itajaí in the south of Brazil. The prospective, observational study analyzed citywide COVID-19 data between July 2020 to December 2022. »

Résumé de l'étude :

« The study team reports in what is still non-reviewed data the following:

- Out of two study cohorts of 3,034 COVID-19 infected patients, the regular use of ivermectin led to a 68% reduction in COVID-19 mortality 25 (0.8%) versus 79 (2.6%) among ivermectin non-users—mortality rates were analyzed both with and without PSM. The reported risk ratio (RR) equaled 0.32; 95% confidence interval, 0.20-0.49;  $p < 0.0001$ .
- Adjusting for residual variables, Kerr and team report a mortality reduction at 79% (RR, 0.30; 95%CI 0.19 – 0.46;  $p < 0.0001$ ).
- A 56% reduction in hospitalization rate (44 versus 99 hospitalizations among ivermectin users and non-users respectively—RR, 0.44; 95% CI, 0.31-0.63;  $p < 0.0001$ ).
- Adjusting for residual variables they reported a reduction in hospitalization at 67% (RR, 0.33; 95%CI 0.23 – 0.66;  $p < 0.0001$ ).

## Conclusion

Dr. Kerr and colleagues report that based on their data, the large, propensity-matched study verifies that **regular use of ivermectin as a prophylactic agent was associated with a significant reduction in COVID-19 infection, hospitalization, and mortality rates.** »

- **6 janvier 2022 : Discrimination contre les Non-Vaccinés - Grèce - Autriche - « Grèce, Canada, Autriche... Ces pays qui ciblent les non vaccinés avec des mesures spécifiques »**

En Autriche :

« En novembre dernier, alors que le pays se reconfinait une nouvelle fois, le chancelier Alexander Schallenberg annonçait dans le même temps l'instauration de la vaccination obligatoire à partir du 1er février. Il s'agit du premier pays de l'Union européenne à la mettre en place. Passée cette date, les non-vaccinés devront payer une amende de 600 euros tous les trois mois. »

En Grèce :

« Une amende mensuelle de 100 euros a été imposée pour convaincre les personnes âgées de se faire vacciner au moins une fois d'ici le 16 janvier. Selon des données rapportées par **Our World in Data**, 66% de la population grecque présente un schéma vaccinal complet, un taux plutôt faible comparé à d'autres pays européens. »

[https://www.bfmtv.com/sante/grece-canada-autriche-ces-pays-qui-ciblent-les-opposants-au-vaccin-avec-des-mesures-specifiques\\_AD-202201060556.html](https://www.bfmtv.com/sante/grece-canada-autriche-ces-pays-qui-ciblent-les-opposants-au-vaccin-avec-des-mesures-specifiques_AD-202201060556.html)

➤ **6 janvier 2022 : Sport - Djokovic - Australie - « TOUT COMPRENDRE sur l'affaire Djokovic à l'Open d'Australie »**

« **Novak Djokovic** est arrivé mercredi à Melbourne afin d'y disputer l'Open d'Australie du 17 au 30 janvier prochain. Mais à son arrivée à l'aéroport, le Serbe n'a pas eu le droit d'entrer sur le territoire. La faute à une demande de visa non-conforme à la situation du joueur vis-à-vis du **Covid-19**. Bénéficiaire d'une exemption médicale pour participer à la première levée du Grand Chelem, "Nole" n'a ainsi pas demandé le bon visa lui permettant d'accéder au sol australien.

L'équipe de l'actuel numéro 1 mondial a rempli le mauvais formulaire pour le visa du joueur. Le visa ensuite demandé n'autorisait pas de dérogation médicale, qui permet à une personne d'être exemptée du vaccin. Novak Djokovic a d'abord été placé à l'isolement dans une salle de l'aéroport de Melbourne avant de se rendre dans un hôtel en attendant la suite de cette affaire avec les autorités. »

- **6 janvier 2022 : Discrimination contre les Non-Vaccinés - Exemples - « Cartes SIM bloquées, permis retirés : ces sanctions folles contre les non-vaccinés dans le monde »**

« L'Indonésie est le premier pays au monde à avoir imposé la vaccination à tous les adultes en février 2021. Les mesures sont diverses et dépendent des autorités locales. Dans certaines régions, des habitants se voient refuser la délivrance de leur permis de conduire car non-vaccinés. D'autres districts coupent les aides sociales ou empêchent la réception de courriers nécessaires pour commencer un travail. Dans la capitale, Djakarta, les non-vaccinés peuvent recevoir une amende allant jusqu'à 290 euros.

Ces mesures donnent parfois lieu à des situations invraisemblables. Le 17 octobre 2021, une jeune femme de 19 ans a vu sa plainte pour viol refusée par la police. Motif : elle n'avait pas de certificat vaccinal pour entrer dans le poste.

Dans la province du Pendjab, au Pakistan, les autorités ont acté l'isolement numérique des non-vaccinés. Depuis le 10 juin dernier, ceux qui ne veulent pas se faire vacciner pourront voir leurs cartes SIM bloquées alors que le téléphone portable est le moyen le plus utilisé pour se rendre sur Internet dans ce pays. »

« Here’s one such paper that was brought to my attention by Dr. David Wiseman. It was written by authors from the CDC and FDA. So you can trust it:

**COVID-19 Vaccine Safety in Children Aged 5–11 Years — United States, November 3–December 19, 2021**

Now look carefully at the second paragraph in the “Review of V-Safe data” section:

Approximately 5.1% of parents reported that their child was unable to perform normal daily activities on the day after receipt of dose 1, and 7.4% after receipt of dose 2. Approximately 1% of parents reported seeking medical care in the week after vaccination; most medical care was received via a clinic appointment (441; 0.6%). **Fourteen (0.02%) children reportedly received care at a hospital**; information regarding reason for hospitalization was available for five children and included appendicitis (two), vomiting and dehydration (one), respiratory infection (one), and retropharyngeal cellulitis (one). **Parents and guardians of all hospitalized children were contacted; two parents completed VAERS reports**, and one revealed hospitalization was reported in error.

**In short, 13 child hospitalizations (since one of the 14 was a mistake), yet only 2 VAERS reports were filed. »**

- **7 janvier 2022 : Vaccins - Dangers - Enfants - « More Children Die From the COVID Shot Than From COVID » - Joseph Mercola**

« Story at a glance :

- According to Collette Martin, a practicing nurse who testified before a Louisiana Health and Welfare Committee hearing

December 6, 2021, children are having “terrifying” reactions to the COVID shot, yet her concerns are simply dismissed

- The average number of adverse event reports following vaccination for the past 10 years has been about 39,000 annually, with an average of 155 deaths. That’s for all available vaccines combined. The COVID jabs alone now account for 983,756 adverse event reports as of December 17, 2021, including 20,622 deaths — and this doesn’t include the underreporting factor, which we know is significant
- Children are at risk for potentially lifelong health problems from the jab. Myocarditis (heart inflammation) has emerged as one of the most common problems, especially among boys and young men
- Myocarditis is inversely correlated to age, so the risk gets higher the younger you are. The risk is also dose-dependent, with boys having a six fold greater risk of myocarditis following the second dose
- British data show deaths among teenagers have spiked since that age group became eligible for the COVID shots. Between the week ending June 26 and the week ending September 18, 2020, 148 deaths were reported among 15- to 19-year-olds. During those same weeks in 2021, 217 deaths occurred in that age group — an increase of 47%

The video above features Collette Martin, a practicing nurse who testified before a Louisiana Health and Welfare Committee hearing December 6, 2021.<sup>1,2</sup> Martin claims she and her colleagues have witnessed “terrifying” reactions to the COVID shots among children — including blood clots, heart attacks, encephalopathy and arrhythmias — yet their concerns are simply dismissed.

Among elderly patients, she’s noticed an uptick in falls and acute onset of confusion “without any known etiology.” Coworkers are also experiencing side effects, such as vision and cardiovascular problems.

Martin points out that few doctors or nurses are aware the U.S. Vaccine Adverse Events Reporting System (VAERS) even exists, so injury reports are not being filed. Hospitals also are not gathering data on COVID jab injuries in any other ways, so there's no data to investigate even if you wanted to. According to Martin:

*“We are not just seeing severe acute [short term] reactions with this vaccine, but we have zero idea what any long-term reactions are. Cancers, autoimmune [disorders], infertility. We just don't know.*

*We are potentially sacrificing our children for fear of MAYBE dying, getting sick of a virus — a virus with a 99% survival rate. As of now, we have more children that died from the COVID vaccine than COVID itself.*

*And then, for the Health Department to come out and say the new variant [Omicron] has all the side effects of the vaccine reactions we're currently seeing — it's maddening, and I don't understand why more people don't see it. I think they do, but they fear speaking out and, even worse, being fired ... Which side of history will you be on? I have to know that this madness will stop.”*

Martin also states she believes the hospital treatment protocol is killing COVID patients. Doctors agree that it's “not working,” but that “it's all we have.” But “that's simply not true,” she says. “It's just what the CDC will allow us to give.” »

- **8 janvier 2022 : Étude - Remèdes - Ivermectine - « Ivermectin Prophylaxis Used for COVID-19 Reduces COVID-19 Infection and Mortality Rates: A City-Wide, Prospective Observational Study of 220,517 Subjects Using Propensity Score Matching » - Lucy Kerr - Instituto Kerr**

« Results: Of the 223,128 citizens of Itajaí considered for the study, a total of 159,561 subjects were included in the analysis; 113,845 (71.3%) regular ivermectin users and 45,716 (23.3%) non-users. Of these, 4,311 ivermectin users were infected, among which 4,194 from the city of Itajaí (3.7% infection rate) and 3,034 non-users (from Itajaí) were infected (6.6% infection rate), a 44% reduction in COVID-19 infection rate (Risk ratio (RR), 0.56; 95% confidence interval (95%CI), 0.53 – 0.58;  $p < 0.0001$ ). Using PSM, two cohorts of 3,034 subjects suffering COVID-19 infection were compared. The regular use of ivermectin led to a 68% reduction in COVID-19 mortality [25 (0.8%) versus 79 (2.6%) among ivermectin non-users; risk ratio (RR), 0.32; 95% confidence interval (CI), 0.20 – 0.49;  $p < 0.0001$ ]. When adjusted for residual variables, reduction in mortality rate was 70% (RR, 0.30; 95%CI 0.19 – 0.46;  $p < 0.0001$ ). There was

a 56% reduction in hospitalization rate (44 versus 99 hospitalizations among ivermectin users and non-users, respectively; RR, 0.44; 95%CI, 0.31 – 0.63; p < 0.0001). After adjustment for residual variables, reduction in hospitalization rate was 67% (RR, 0.33; 95%CI 0.23 – 0.66; p < 0.0001).

**Conclusion: In this large, propensity score matched study, regular use of ivermectin as a prophylactic agent was associated with significantly reduced COVID-19 infection, hospitalization, and mortality rates. »**

- **9 janvier 2022 : Vaccins - Dangers - Étude - « New big data study of 145 countries show COVID vaccines makes things worse (cases and deaths) » - Steve Kirsch**

« The next time you see you county health officer, President Biden, or Boris Johnson why not ask them if they can find a mistake in this study by **Kyle A. Beattie** entitled Worldwide Bayesian Causal Impact Analysis of Vaccine Administration on Deaths and Cases Associated with COVID-19: A BigData Analysis of 145 Countries (the PDF version is here).

**The study found that the COVID vaccines cause more COVID cases per million (+38% in US) and more deaths per million associated with COVID (+31% in US).**

The abstract says:

*The statistically significant and overwhelmingly positive causal impact after vaccine deployment on the dependent variables total deaths and total cases per million **should be highly worrisome for policy makers.** They indicate a marked increase in both COVID-19 related cases and death due directly to a vaccine deployment that was originally sold to the public as the “key to gain back our freedoms.” The effect of vaccines on total cases per million and its low positive association with total vaccinations per hundred signifies a limited impact of vaccines on lowering COVID-19 associated cases.*

*These results should **encourage local policy makers to make policy decisions based on data**, not narrative, and based on local conditions, not global or national mandates. These results should also encourage policy makers to begin looking for other avenues out of the pandemic aside from mass vaccination campaigns.*

### **In other words, we were lied to**

The vaccines are making this worse, not better. This is why we are not getting ourselves out of the hole. Mandating vaccines are making this

**This is hardly the first study to reach those conclusions. These studies, all done independently, found the same thing—the more you vaccinate, the worse things get.**

➤ **10 janvier 2022 : Variant Omicron - Remèdes - Xevudy - « Face à Omicron, la HAS autorise l'utilisation du Xevudy, un traitement par anticorps de synthèse »**

« Un nouveau traitement par anticorps de synthèse, le Xevudy du laboratoire britannique GSK, a été approuvé le 7 janvier par la Haute autorité de santé (HAS) qui le juge prometteur contre l'infection par Omicron, alors que d'autres médicaments viennent d'être retirés à cause de leur inefficacité contre le nouveau variant. Basé sur la molécule sotrovimab, le Xevudy sera donc, pour l'heure, le seul traitement par anticorps à pouvoir être utilisé après une infection avérée à Omicron. Un autre traitement de ce type, l'Evusheld d'AstraZeneca, est lui aussi considéré comme efficace face à Omicron mais il s'administre de manière préventive, notamment chez les personnes dont l'organisme résiste à la vaccination. »

➤ **10 janvier 2022 : Vaccins ARN - Explication - Fonctionnement - Dangers - « Elementary, my dear Watson: why mRNA vaccines are a very bad idea » - Doctors for COVID Ethics Michael Palmer, MD and Sucharit Bhakdi, MD**

« **Abstract:** Pfizer's and Moderna's mRNA-based COVID-19 vaccines have caused injury and death on an unprecedented scale. This short article explains from first principles why adverse events must be expected not just after the first injection of such a vaccine but after each booster shot as well. The argument is not limited to SARS-CoV-2 or its spike protein but applies generally to any non-self antigen introduced in the form of mRNA. Accordingly, not only must the COVID mRNA vaccines be stopped, but mRNA vaccines should never be used again, regardless of the infectious agent in question.

The Pfizer and Moderna mRNA vaccines consist of a synthetic messenger RNA (mRNA) that encodes the SARS-CoV-2 “spike protein,” which is normally found on the surface of the coronavirus particles. This mRNA is coated with a mixture of synthetic *lipids*—fat-like molecules—that protect it from degradation during transport within the body, and which also facilitate its uptake into the target cells through *endocytosis*.

After the vaccine particle has entered a cell, the lipids are stripped off, and the mRNA is released into the cytosol (the intracellular fluid). The mRNA then binds to *ribosomes*—the cell's little protein factories—and directs them to synthesize the actual spike protein molecules. Most of the spike protein molecules will then be transported to the cell surface.

Sooner or later, cells that express this protein, or the remnants of such cells, will reach the organizational centers of the immune system in the lymphatic organs. The spike protein will then be recognized by various types of immune cells, including B-lymphocytes (B-cells), which will begin to make antibodies to it.

Furthermore, as with any protein that is synthesized within the cell, a small number of molecules will undergo fragmentation, and the

fragments will be presented on the cell surface in association with specific (HLA-) carrier proteins. The purpose of this mechanism is *immune surveillance*: as soon as fragments show up of some protein which the immune system does not recognize as “self,” that is, as belonging to the human body, an immune response will be mounted against any cells that produce it. This response will result in the formation of cytotoxic T-lymphocytes (T-killer cells) that attack and destroy the cells which present those antigen fragments.

The cytotoxic activity of the T-killer cells will be augmented by several other immune effector mechanisms that are initiated by the antibodies. If this combined immune attack happens to the cells that line the blood vessels—the *endothelial* cells—the resulting lesion may cause blood clotting. Stroke, heart attacks, and thromboses must be expected, and many such cases have indeed been reported as adverse events after vaccination with Pfizer’s and Moderna’s COVID-19 mRNA vaccines (as well as with the adenovirus-based vaccines produced by AstraZeneca and Johnson & Johnson).

These immunological mechanisms must be expected to operate with any other mRNA-encoded viral antigens. In the case of COVID19 vaccines, there is a second, unique pathway that connects expression of the spike protein to vascular disturbances. A centrally important part of the spike protein (the S1 fragment) can be cleaved off and released from the cell. The S1 fragment can then bind to blood platelets (thrombocytes) and to endothelial cells at remote sites, effecting their activation. This second pathway of triggering vessel damage and blood clots is specific for the SARS-CoV-2 spike protein. »

Le journaliste d'investigation américain, James O'Keefe (Project Veritas), a publié le 10 janvier 2022 **un mémorandum en date du 13 août 2021 et émanant de Joseph Murphy, militaire travaillant pour le DARPA.**

D'après ce document :

- 1. Le virus aurait été créé à Wuhan par une société américaine du nom d'EcoHealth Alliance (proche de Fauci) dans le cadre de la mise au point d'un vaccin. Cette société a été financé par des fonds alloués par Antony Fauci (à travers le NAIAD).**
- 2. Dès avril 2020 les autorités américaines savaient que l'Ivermectine et la Chloroquine étaient efficaces contre le Covid. (Page 4)**

### **3. Les autorités américaines connaissaient dès le début de la pandémie les dangers que représentaient les vaccins à ARN pour la santé humaine et leur inefficacité.**

Les premières pages du Mémorandum sont publiées ci-dessous, après la présentation générale du document faite par Project Veritas.

Présentation du document par Project Veritas :

- **« Military documents state that EcoHealth Alliance approached DARPA in March 2018 seeking funding to conduct gain of function research of bat borne coronaviruses. The proposal, named Project Defuse, was rejected by DARPA over safety concerns and the notion that it violates the gain of function research moratorium.**
- **The main report regarding the EcoHealth Alliance proposal leaked on the internet a couple of months ago, it has remained unverified until now. Project Veritas has obtained a separate report to the Inspector General of the Department of Defense, written by U.S. Marine Corp Major, Joseph Murphy, a former DARPA Fellow.**
- **“The proposal does not mention or assess potential risks of Gain of Function (GoF) research,” a direct quote from the DARPA rejection letter.**
- **Project Veritas reached out to DARPA for comment regarding the hidden documents and spoke with the Chief of Communications, Jared Adams, who said, “It doesn’t sound normal to me,” when asked about the way the documents were buried.**

[WASHINGTON, D.C. – Jan. 10, 2022] Project Veritas has obtained startling never-before-seen documents regarding the origins of COVID-19, gain of function research, vaccines, potential treatments which have been suppressed, and the government’s effort to conceal all of this.

The documents in question stem from a report at the Defense Advanced Research Projects Agency, better known as DARPA, which were hidden in a top secret shared drive.

DARPA is an agency under the U.S. Department of Defense in charge of facilitating research in technology with potential military applications.

Project Veritas has obtained a separate report to the Inspector General of the Department of Defense written by U.S. Marine Corp Major, Joseph Murphy, a former DARPA Fellow.

The report states that EcoHealth Alliance approached DARPA in March 2018, seeking funding to conduct gain of function research of bat borne coronaviruses. The proposal, named Project Defuse, was rejected by DARPA over safety concerns and the notion that it violates the basis gain of function research moratorium.

**According to the documents, NAIAD, under the direction of Dr. Fauci, went ahead with the research in Wuhan, China and at several sites across the U.S.**

**Dr. Fauci has repeatedly maintained, under oath, that the NIH and NAIAD have not been involved in gain of function research with the EcoHealth Alliance program.** But according to the documents obtained by Project Veritas which outline why EcoHealth Alliance's proposal was rejected, DARPA certainly classified the research as gain of function.

“The proposal does not mention or assess potential risks of Gain of Function (GoF) research,” a direct quote from the DARPA rejection letter.

**Major Murphy's report goes on to detail great concern over the COVID-19 gain of function program, the concealment of documents, the suppression of potential curatives, like Ivermectin and Hydroxychloroquine, and the mRNA vaccines.**

Project Veritas reached out to DARPA for comment regarding the hidden documents and spoke with the Chief of Communications,

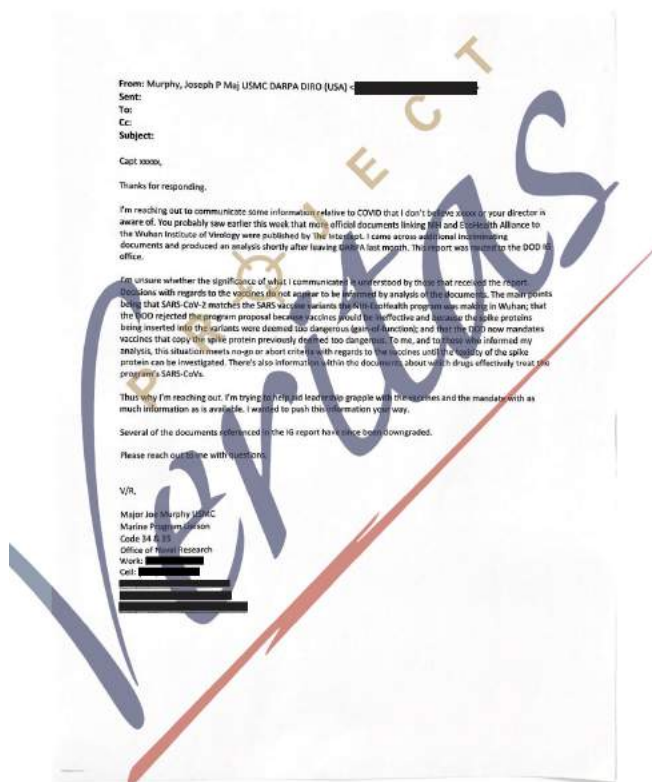

Jared Adams, who said, “It doesn’t sound normal to me,” when asked about the way the documents were shrouded in secrecy. “If something resides in a classified setting, then it should be appropriately marked,” Adams said. “I’m not at all familiar with unmarked documents that reside in a classified space, no.”

In a video breaking this story published on Monday night, Project Veritas CEO, James O’Keefe, asked a foundational question to DARPA:

“Who at DARPA made the decision to bury the original report? They could have raised red flags to the Pentagon, the White House, or Congress, which may have prevented this entire pandemic that has led to the deaths of 5.4 million people worldwide and caused much pain and suffering to many millions more.”

Dr. Anthony Fauci has not yet responded to a request for comment on this story. »

1. SARS-CoV-2 is an American-created recombinant bat vaccine or its precursor virus, as was created by EcoHealth Alliance program at the Wuhan Institute of Virology (WIV), as suggested by data reporting surrounding the earliest hypothesis. The details of this program have been suggested at various pandemic began. These details can be found in the EcoHealth Alliance proposal response to the DARPA FREEMPT program Broad Agency Announcement (BAA) H8001850017, dated March 2018 - a document not publicly disclosed.

The content of the proposed program are extremely detailed. Peter Daszak lays out step-by-step what the organization intends to do by phase and by location. The relevant scientists involved, their roles, and their institutions are indicated. The funding plan for the NTI work is its own document. The reasons why nonpharmaceutical interventions like masks and reduced airways access like the early vaccines do not work well can be extrapolated from the details. The reasons why the early treatment protocols work as curatives are apparent.

SARS-CoV-2 form as it occurred is likely as a precursor, deliberately virulent, humanized recombinant SARS-CoV that was to be reverse engineered into a live attenuated SARS-CoV bat vaccine. Its nature can be determined from analysis of its genome with the context provided by the EcoHealth Alliance proposal. Joining this analysis with US intelligence collections on Wuhan will aid this determination.

UNCLASSIFIED

UNCLASSIFIED

When synthesized with the EcoHealth Alliance proposal, US collections confirm EcoHealth Alliance was performing the work proposed. The analysis produces their reports in a vacuum, absent the context the proposal provides. As a fellow at DARPA, I could see both, and can do the synthesis. For instance, WIV personnel identified in intelligence reports are named in the proposal, these people use the location of the proposal in the collections, and the virus variants proposed for experimentation are identical to those gleaned by collections. Moreover, I am also privy to information obtained by congressional office investigators and by DHS/CSS, which further corroborates that the program detailed in the BAA response was conducted until it was shut down in April 2020.

The purpose of the EcoHealth program, called DEFUSE in the proposal, was to inoculate bats in the Yunnan, China caves where confirmed SARS-CoV-2 were found. Originally, doing this would prevent another SARS-CoV-2 pandemic; the bat/batting system would be reinforced to prevent a deadly SARS-CoV from emerging. The specific language used to inoculate bats with novel chimeric polypeptide spike proteins to enhance their adaptive immune memory against specific high-risk viruses. Being defense-related, it makes sense that EcoHealth submitted the proposal first to the Department of Defense, before an entity like NIH/NIAID. The BAA response is dated March 2018 and was submitted by Peter Daszak, president of EcoHealth Alliance.

DARPA rejected the proposal because the work was too close to violating the gain-of-function (GoF) moratorium. Daszak what Peter Daszak says in the proposal that the work would be "as is known, to deal with H5N1 and H7N9 did not reject the proposal. The work took place at the WIV and at several sites in the US, identified in detail in the proposal."

The EcoHealth Alliance response to the FREEMPT BAA is placed along with other proposal documents in the FREEMPT folder on the DARPA Biological Technologies Office (BTO) (top secret) share drive, address: Network\\files\\BTO\\C\\Folder\\FREEMPT

This folder was empty for a year. The files, completely unmarked with classification or distribution data, were placed in this folder in July 2021, which conspicuously aligns with media reporting, my probing, and Senator Wall's inquiry into NIA/NIAID gain-of-function programs. The unmarked nature combined with the timing signals that the documents were being hidden. Now files at DARPA go unmarked in classification or distribution, including proprietary documents. Furthermore, FREEMPT is an unclassified program.

The files are also now held by Marine Corps Intelligence Activity (MCIA). They are identified in the reference block above.

SARS-CoV-2, sometimes referred to as SARS-CoV-NIV, is a synthetic spike protein virus engineered to attach to human ACE2 receptors and

UNCLASSIFIED

UNCLASSIFIED

inserted into a recombinant bat SARS-CoV backbone. It is likely a live vaccine not yet engineered to a more attenuated state that the proposal sought to create with its final version. It indeed had spread rapidly because it was aerosolized so it could efficiently infect bats in caves, but it was not ready to infect bats yet, which is why it does not appear to infect bats. The reason the disease is so confusing is because it is less a virus than it is engineered spike proteins hitch-hiking aside on a SARS-CoV quasispecies swarm. The closer it is to the final live attenuated vaccine form, the more likely that it has been deattenuated since initial escape in August 2019.

The utility of certain countermeasures can be extrapolated from the documents:

- The team selected for SARS-CoV that were most monoclonal antibody and vaccine resistant.
- It is not practical to inoculate bats directly with spikes, so the team developed an aerosol to deliver the inoculation directly into the caves. To ensure it worked well, they developed an aerosol against *Aspergillus*.
- The proposal notes that interferon, Resdenivir, and chloroquine phosphate inhibit SARS-CoV viral replication.

Because of its (now) known nature, the SARS-CoV-NIV illness is readily resolved with early treatment that inhibits the viral replication and suppresses the spike proteins against the body's immune response. The body tries to clear the spikes from the ACE2 receptors. Many of the early treatment protocols ignored by the authorities work because they inhibit viral replication or modulate the immune response to the spike proteins, which makes sense within the context of what EcoHealth was creating. One of those treatment protocols also inhibits the action of the engineered spike protein. For instance, Interferon beta is curative in April 2020 weeks throughout all phases of illness because it both inhibits viral replication and modulates the immune response. Of note, chloroquine phosphate (Hydroxychloroquine, identified April 2020 as curative) is identified in the proposal as a SARS-CoV inhibitor, as is interferon (identified May 2020 as curative).

The gene-encoded, or "mRNA," vaccines work poorly because they are synthetic replications of the already-synthetic SARS-CoV-NIV spike proteins and possess no other epitopes. The mRNA instructs the cells to produce synthetic copies of the SARS-CoV-NIV synthetic spike protein directly into the bloodstream, wherein they spread and produce the same ACE2 immune storm that the recombinant vaccine does. Many doctors in the country have identified that the symptoms of vaccine reactions mirror the symptoms of the disease, which corroborates with the similar synthetic nature and function of the respective spike proteins. The vaccine recipient has no defense against the bloodstream entry, but their nose protects them from the recombinant spike protein quasispecies during "natural infection" (better termed as aerosolized inoculation).

UNCLASSIFIED

UNCLASSIFIED

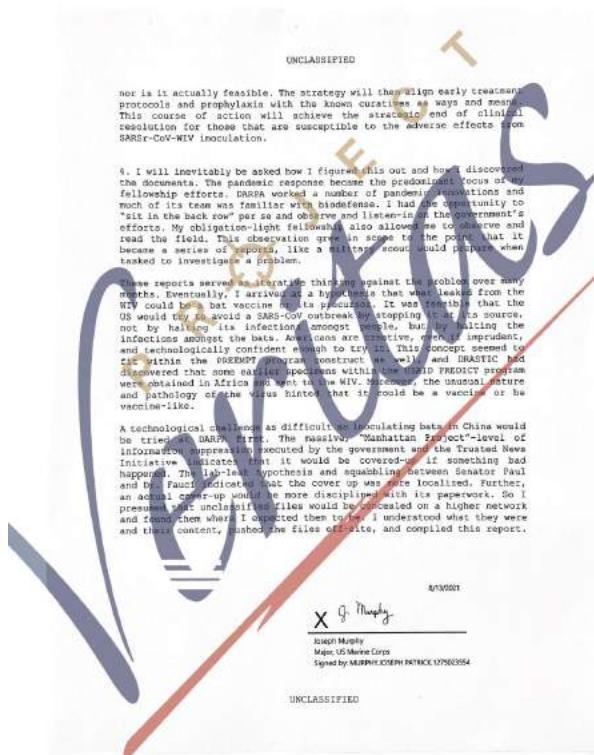

Furthermore, the EcoHealth proposal states that a "vaccine approach lacks sufficient epitope coverage to protect against quasispecies of coronavirus." Consequently, they were trying to make vaccines work by "targeted immune boosting via vaccine inoculators using chimeric polyvalent recombinant spike proteins." The nature of using a spike protein vaccine with one epitope against a spike protein vaccine with a quasispecies may explain the unusual (and potentially detrimental) antibody response among the vaccinated of the new COVID-19 variants. Fundamentally, the knowledge the proposal provides signals that the risk of Antibody Dependent Enhancement (ADE) from vaccination should be evaluated with high priority, on top of the reality that spike-epitope vaccines will have little effect against SARS-CoV-NIV, as indicated in the proposal.

The potential for SARS-CoV-NIV to deattenuate requires immediate attention. Live vaccines have been found to deattenuate in the past. If this is the case with SARS-CoV-NIV, then the basic vaccination program actually performs an elevated gain-of-function for it. Since it is designed for bats off of a human-susceptible SARS-CoV, vaccinating humans against it actually gains its function back (creates a more deattenuated human-susceptible form). Inhibiting the SARS-CoV-NIV spike protein to gain robustness against monoclonal vaccines is one of the steps of the DEFUSE program. The mechanism to improve the SARS-CoV-NIV spike protein (other than direct engineering) is to challenge it against antibodies that have spike protein-specific antibodies. The attenuated virus will either die or adapt its form to neutralize the spike protein-specific antibodies. The intent was to perform this task against human-specific and then "bat-specific" mice. Instead, it was done with the world's population.

SARS-CoV-NIV is meant to kill the host, but to immunize them. This nature may explain its general harmlessness to most people, and its harmfulness to the old and comorbid, who are in general more susceptible to vaccine reactions. The asymptomatic nature is also explained by the bat vaccine-injection in its creators. In good vaccine does not generate symptoms. Such effects would be expected of an immature vaccine, or a vaccine being reverse-engineered from a more virulent form into an attenuated form. The spike protein effectively ACE2 receptors exacerbates the harmfulness in accordance with age and comorbidity. The nature of SARS-CoV-NIV's deattenuation will also indicate future virulence, though knowing its nature at last neutralizes the threat as effective transmission can be applied with confidence.

3. DRASTIC and other scientists will clean up my description of SARS-CoV-NIV's nature and progression within the DEFUSE program. This information is sufficient for an investigative report and more than enough to correct the existing pandemic strategy. Previously, the nation did not know itself for the adversary in the pandemic conflict. Now it knows both. The problem can be framed appropriately and specifically against a confirmed hypothesis. Limiting disease transmission can be stopped as the implied strategic end, as it is not the actual problem,

- **11 janvier 2022 : John Ioannidis - Stanford - Étude - Covid - Taux de Survie - Jeunes - « Stanford Epidemiology Prof Study COVID Survival Rate For Under 20s Is 99.9987% » - Paul Joseph Watson**

« The data used from the study was taken before the advent of mass vaccination programs, meaning the numbers apply to unvaccinated people.

Ioannidis previously published an analysis of seroprevalence (antibody) studies from 2020, which resulted in him being able to reveal that the infection fatality rate for COVID globally was around 0.15%. In Europe, the number stood at 0.3%-0.4% , while in Africa and Asia it went down to 0.05%.

**Now the professor has published new information that breaks down infection fatality rates by age.**

Age	Infection Fatality Rate (IFR)
0-19	0.0013%
20-29	0.0088%
30-39	0.021%
40-49	0.042%
50-59	0.14%
60-69	0.65%
70+ (non-care home)	2.9%
70+ (all)	4.9%

Source: <https://www.medrxiv.org/content/10.1101/2021.07.08.21260210v2.full>

***“From analysis of 25 seroprevalence surveys across 14 countries, Prof. Ioannidis and his colleague found the IFR varied from 0.0013% in the under-20s (around one in 100,000) to 0.65% in those in their 60s,”*** writes Will Jones. »

- **11 janvier 2022 : Vaccins - Dangers - « Internal hospital data confirm a huge increase in patients with vaccine side effects in 2021 » - Alex Berenson**

« At many hospitals, the number of patients reported to have post-vaccine injuries rose fivefold or more after Covid vaccines were introduced in December 2020, medical records databases show.

**For example, one database including 100 institutions included more than 8900 reports in 2021, compared to fewer than 2000 in 2019 and 2020. A different system reported an increase from 162 in 2019 to more than 1100 in 2021.**

Several people with access to different databases provided the figures, on the condition that they remain anonymous, as the databases are proprietary and confidential. **All the databases showed a similar increase, ranging from four-fold to more than 10-fold.**

The rise parallels the massive increase in vaccine injuries and deaths reported to VAERS - the federal Vaccine Adverse Events Reporting System - in 2021. **Over 740,000 VAERS reports were submitted last year, compared to 50,000 in 2020. Of the 2021 reports, 700,000 were Covid related.** »

- **11 janvier 2022 : Israël - Politique Sanitaire - Echec - « Covid-19 policy: Leading Israeli immunologist writes open letter: “It is time to admit failure” » - Swiss Policy Research**

« **Professor Ehud Qimron**, head of the Department of Microbiology and Immunology at Tel Aviv University and one of the leading Israeli immunologists, has written an open letter sharply criticizing the Israeli – and indeed global – management of the coronavirus pandemic. »

Extrait de la Lettre :

« Ministry of Health, it’s time to admit failure.

In the end, the truth will always be revealed, and the truth about the coronavirus policy is beginning to be revealed. When the destructive concepts collapse one by one, there is nothing left but to tell the experts who led the management of the pandemic – we told you so.

Two years later, you finally realize that a respiratory virus cannot be defeated and that any such attempt is doomed to fail. You do not admit it because you have admitted almost no mistake in the last two years. Still, in retrospect, it is clear that you have failed miserably in almost all of your actions, and even the media is already having a hard time covering your shame.

Despite years of observations and scientific knowledge, you refused to admit that the infection comes in waves that fade by themselves. You insisted on attributing every decline of a wave solely to your actions, and so through false propaganda, “you overcame the plague.” »

➤ **11 janvier 2022 : Variant Omicron - Étude - Inocuité - « Clinical outcomes among patients infected with Omicron (B.1.1.529) SARS-CoV-2 variant in southern California » - Joseph A. Lewnard, Vennis X. Hong, M. Patel, Rebecca Kahn, Marc Lipsitch, Sara Y. Tartof**

« **Results** Our analyses included 52,297 cases with SGTF (Omicron) and 16,982 cases with non-SGTF (Delta [B.1.617.2]) infections, respectively. Hospital admissions occurred among 235 (0.5%) and 222 (1.3%) of cases with Omicron and Delta variant infections, respectively. Among cases first tested in outpatient settings, the adjusted hazard ratios for any subsequent hospital admission and symptomatic hospital admission associated with Omicron variant

infection were 0.48 (0.36-0.64) and 0.47 (0.35-0.62), respectively. Rates of ICU admission and mortality after an outpatient positive test were 0.26 (0.10-0.73) and 0.09 (0.01-0.75) fold as high among cases with Omicron variant infection as compared to cases with Delta variant infection. **Zero cases with Omicron variant infection received mechanical ventilation, as compared to 11 cases with Delta variant infections throughout the period of follow-up (two-sided  $p < 0.001$ ).** Median duration of hospital stay was 3.4 (2.8-4.1) days shorter for hospitalized cases with Omicron variant infections as compared to hospitalized patients with Delta variant infections, reflecting a 69.6% (64.0-74.5%) reduction in hospital length of stay.

**Conclusions: During a period with mixed Delta and Omicron variant circulation, SARS-CoV-2 infections with presumed Omicron variant infection were associated with substantially reduced risk of severe clinical endpoints and shorter durations of hospital stay. »**

- **12 janvier 2022 : Variant Omicron - Médias - Fake News - Peur - Hystérie - Fraude - « Media Fakes First Omicron Death Story » - Joseph Mercola**

**« STORY AT-A-GLANCE**

- Despite all signs indicating the SARS-CoV-2 Omicron variant causes only mild illness, the World Health Organization declared it a “variant of concern,” and countries responded with renewed mask mandates and lockdowns

- December 20, 2021, the U.S. press went wild, reporting that the first Omicron death had been reported in Houston, Texas. Some claimed the man was killed by reinfection with Omicron even though he'd recovered from previous COVID-19 illness, suggesting natural immunity doesn't work against this variant
- As it turns out, this was fake news. The county health department could not confirm that the patient died "from" Omicron infection, only that he had tested positive for it at some point before death. He reportedly had underlying health conditions
- Authorities wasted no time to use the Omicron death that really wasn't to scare the unvaccinated. But the data tell a different story. Those who are double- or triple-jabbed are two to five times more likely to develop secondary infections when infected with Omicron than the unvaccinated, who have a 1.17 higher risk of secondary infections when infected with Omicron, compared to Delta
- While the unvaccinated have higher transmission rates, they're less likely than the COVID-jabbed to develop problematic infections from Omicron, suggesting Omicron evades "vaccine"-induced immunity »

➤ **Janvier 2022 : Vaccins - Dangers - Synthèse - « Covid Vaccine Adverse Events » - Swiss Policy Research**

***A) Neurological disorders***

Covid vaccinations have been associated with several neuro-inflammatory and neuro-degenerative disorders, including Guillain-Barré syndrome (GBS), multiple sclerosis (MS, new-onset or relapse), transverse myelitis (TM), and acute disseminated encephalomyelitis (ADEM).

Neurological auto-immune reactions may be due to antigenic cross-reactivity and typically occur within days or weeks of vaccination. Symptoms vary and may include muscle weakness and paralysis, tremors and seizures, as well as cognitive issues (see video below).

By November 2021, about 2000 cases of post-vaccination GBS had been reported to the US VAERS systems and about 500 cases had been reported to the British MHRA system. Back in 1976, the US swine flu vaccination campaign was stopped due to an increased risk of GBS.

**See also:** [Studies and case reports](#) (TG)

***B) Menstrual disorders, miscarriages, birth defects***

US authorities have argued that covid vaccines “appear to be completely safe for pregnant women” (NIH) and “are thought not to be a risk to lactating people or their breastfeeding babies” (CDC). However, the US VAERS system counts already more than 3,000 post-vaccination miscarriages, and it has been known since

March 2021 that covid vaccines, or the spike protein they produce, may get into breast milk and [sicken or kill a baby](#) (e.g. by causing internal bleeding or allergic reactions).

In addition, by September 2021, more than 30,000 British women [had reported](#) post-vaccination menstrual disorders, such as excessive bleeding, and several cases of post-vaccination birth defects, including [cardiac anomalies](#) or [pulmonary hemorrhage](#), have been reported.

In Scotland, an investigation has been launched into a [spike in deaths](#) among newborn babies. Of note, the Pfizer vaccine trial in pregnant women [continues to be delayed](#) for “lack of participants”. Regarding female fertility, it is too early to know if covid vaccines might have [any impact](#).

**Update:** An age- and trimester-adjusted analysis of British stillbirth data found that covid vaccination (mostly in the third trimester) increased the risk of stillbirth [by about 33%](#).

### ***C) Heart inflammation, heart attacks, cardiac arrest***

In March 2021, Israel first reported a [“murky wave of heart attacks”](#) and an increase in post-vaccination all-cause mortality. In June, the Israeli Ministry of Health [confirmed that](#) covid mRNA vaccines may cause heart inflammation (myocarditis) and heart attacks, especially in young people. In September, a US study showed that in healthy male adolescents, the risk of post-vaccination myocarditis is [about five times higher](#) than the risk of covid hospitalization.

In young males, the risk of post-vaccination myocarditis may reach [about 1 in 1000](#) (including subclinical cases). In October, several Nordic countries partially or fully [halted the use](#) of the high-dosed Moderna mRNA vaccine due to the elevated risk of myocarditis. In November, Taiwan [suspended](#) the second dose of the Pfizer vaccine in adolescents.

Post-vaccination myocarditis may also affect athletes and may lead to **sudden cardiac arrest**. Since the beginning of the covid

vaccination campaign, several hundred professional athletes [collapsed or died](#) from cardiac arrest or heart attacks. In several countries, cases of myocarditis have [significantly increased](#) during covid vaccination campaigns. Myocarditis, even if “mild” (i.e. self-limiting), may cause [long-term heart issues](#).

A study in mice found that if mRNA vaccine gets into a vein, the heart muscle absorbs the mRNA, starts producing coronavirus spike protein, gets attacked by the immune system, and develops [inflammation and cell damage](#) (i.e. myocarditis). This is likely what happens in humans, too, if the vaccine accidentally gets injected into a blood vessel instead of muscle cells.

**See also:** [Athlete cardiac arrests](#) (overview) and [Cardiac Arrest in Athletes](#) (TG)

#### ***D) Blood clots and strokes***

Blood clots, stroke and pulmonary embolism continue to be major covid vaccine adverse events, especially after adenovector covid vaccines (AstraZeneca, Johnson&Johnson). In response, several countries have [suspended the use](#) of adenovector covid vaccines altogether or in non-senior citizens, in whom the risk is most pronounced.

In April 2021, AstraZeneca acknowledged that [up to 10%](#) of people receiving their covid vaccine may develop transient thrombocytopenia (low blood platelet count), which, in severe cases, may turn into **thrombotic thrombocytopenia** and increased risk of blood clots.

Life-threatening blood clots have also affected professional **athletes** and have caused [pulmonary embolism](#) (blood clots in the lung) and [cerebral bleeding](#). A 44-year-old [BBC moderator](#) died due cerebral bleeding caused by the AstraZeneca vaccine. Several cases of [leg amputations](#) due to vaccine-induced blood clots have also been reported (see image below).

Of note, the risk of blood clots may increase during **air travel**. British Airways confirmed the death of [three of their pilots](#), aged 30 to 55, without disclosing their cause of death or vaccination status. A

German Lufthansa First Officer [collapsed](#) during a flight from Spain to Germany.

There are also ‘anecdotal’ reports of unusual cardiovascular complications **several months** after vaccination, raising the question of potential long-term cardiovascular damage: for instance, six months after vaccination, a healthy 13-year-old boy had a [fatal cardiac arrest](#), a healthy 15-year-old girl had a [fatal brain aneurysm](#), and a healthy ~35-year-old woman had a [life-threatening stroke](#).

### ***F) Eye disorders and blindness***

Covid vaccines may lead to bleeding and inflammation in the eyes and, in severe cases, to retinal detachment and blindness. In the UK, several hundred cases of post-vaccination blindness [have been reported](#). In the US, [about 2,500 reports](#) to the VAERS system mention post-vaccination blindness. There are also reports of post-vaccination eye disorders affecting the eye lens (e.g. cataract), but the causality is currently less clear in these cases.

<https://swprs.org/covid-vaccine-adverse-events/>

### ➤ **13 janvier 2022 : Vaccins - Dangers - « Covid infections and deaths SOAR after the first vaccine dose » - Alex Berenson**

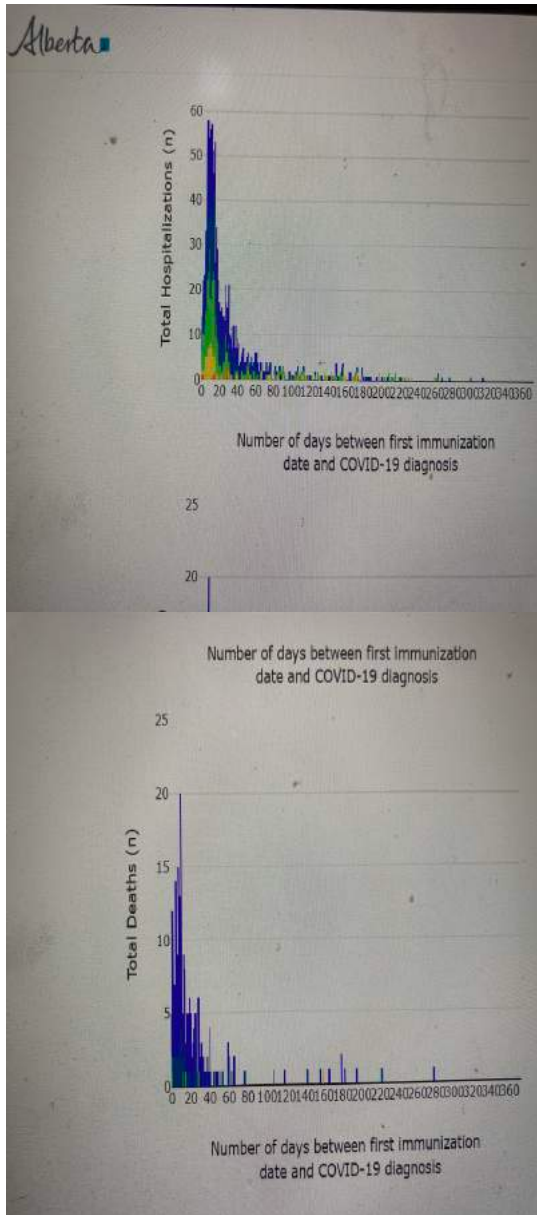

« Stunning figures from Canada show a huge spike in cases after vaccinations; to the Centers for Disease Control and the media, all these deaths are occurring in the "unvaccinated." »

The Covid vaccines look worse and worse.

A reader has pointed out an amazing dataset from the province of Alberta, Canada which reports Covid cases, hospitalizations, and deaths *by day after the first and second vaccine doses*.

Infections, hospitalizations, and deaths from Covid all soar in the days and weeks after people receive their first vaccine dose.

Hospitalizations:

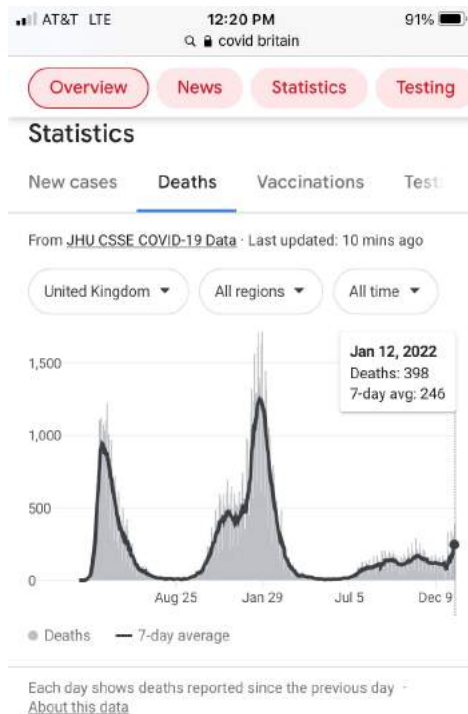

SOURCE: <https://www.alberta.ca/stats/covid-19-alberta-statistics.htm#vaccine-outcomes>

Alberta has about 4.4 million people, so this sample is not small. The vast majority of vaccines given in the province are the mRNA vaccines from Pfizer and Moderna, though about 10 percent are the DNA/AAV vaccines, mostly from AstraZeneca, which is not used in the United States.

The figures further support the national-level data from Israel and Britain, which last year saw Covid deaths hit all-time highs just after they began mass vaccination campaigns.

The chart below tracks Covid deaths in the United Kingdom, which peaked in January 2021, just after Britain began vaccinating elderly people. At the time, the United Kingdom suffered about 1,200 Covid deaths per day, the highest per-capita total any big country has ever seen, the equivalent of about 6,000 daily deaths in the United States. »

- **13 janvier 2022 : Vaccins - Dangers - Dr Kory** - « Les décès liés aux vaccins sont impressionnants et ne cessent d'augmenter... Cette situation est plus que critique en ce moment » - Dr Pierre Kory

« Le Dr Pierre Kory, expert en soins intensifs contre le CV19 et pulmonaire de renommée mondiale, affirme que les données sont claires, que les injections de CV19 ne sont « ni sûres, ni efficaces » mais au contraire montrent qu'elles causent un grand nombre de décès. La situation va s'aggraver si on n'arrête pas ces doses de rappel rapidement. Le Dr Kory prévient : « Ils ont déjà battu des records de mortalité avec ces vaccins il y a près d'un an. Maintenant, vous commencez à le voir dans les données actuarielles des compagnies d'assurance-vie. Les compagnies d'assurance-vie ont payé des compensations comme elles ne l'ont jamais fait auparavant, et elles remarquent que les décès ne peuvent pas être expliqués par le Covid. Si vous regardez la morbidité et la mortalité réelles du CDC. . . 2019, 2020 et 2021 chez les 18 à 64 ans . . . vous verrez en Amérique, à partir

du deuxième trimestre de l'année 2021 (lorsque les vaccins ont commencé), la mortalité a commencé à augmenter, et elle est passée de 120 % au-dessus de la normale à 140 % au-dessus de la normale, et elle a largement dépassé les taux de mortalité en 2020. La différence en 2020 et 2021, nous avons eu du covid pendant les deux années. En 2021, nous avons eu les vaccins. Ils savent que le nombre de décès qu'ils signalent ne peut pas être expliqué par Covid. »

- **13 janvier 2022 : Remèdes - Mélatonine - Étude - « Melatonin Significantly Reduces COVID-19 Mortality » - Joseph Mercola**

« Over the past two years, melatonin has emerged as a surprise weapon against COVID-19. It's been shown to play a role in viral, bacterial and fungal infections<sup>14</sup> and as early as June 2020, researchers suggested it might be an important adjunct to COVID-19 treatment.<sup>15,16,17</sup> According to the authors of that paper, melatonin attenuates several pathological features of COVID-19, including:<sup>18</sup>

- Excessive oxidative stress and inflammation
- Exaggerated immune response resulting in a cytokine storm
- Acute lung injury
- Acute respiratory distress syndrome

In October 2020, a scientific review,<sup>19</sup> “Melatonin Potentials Against Viral Infections Including COVID-19: Current Evidence and New Findings,” summarized the mechanisms by which melatonin can protect against and ameliorate viral infections such as respiratory syncytial virus, viral hepatitis, viral myocarditis, Ebola, West Nile virus and dengue virus. »

- **14 janvier 2022 : UK - Propagande - Violence - Peur - Hystérie - Simon Ruda - « British Government Used “Propagandistic” Fear Tactics to Scare Public Into Mass Compliance »**

**« The British government used “propagandistic” fear tactics to scare the public into mass compliance during the first COVID lockdown, according to a behavioral scientist who worked inside Downing Street.**

**Simon Ruda co-founded Number 10’s ‘Nudge Unit’, which was initially set up to encourage positive behavioral changes in the British public without the need for coercion or legislation, but was weaponized during the pandemic to create scaremongering.**

“In my mind, the most egregious and far-reaching mistake made in responding to the pandemic has been the level of fear willingly conveyed on the public,” wrote Ruda.

“That fear seems to have subsequently driven policy decisions in a worrying feed-back loop,” he added, noting that such actions amounted to “state sanctioned propaganda.”

The behavioral scientist said that an obsession with daily case numbers came to dominate thinking, serving to spread even more fear. »

- **15 janvier 2022 : Étude - Remèdes - Ivermectine - « Ivermectin Prophylaxis Used for COVID-19: A Citywide, Prospective, Observational Study of 223,128 Subjects Using Propensity Score Matching » - Lucy Kerr, Flavio A. Cadegiani, Fernando Baldi, Raysildo B. Lobo, Washington Luiz O. Assagra, Fernando Carlos Proença, Pierre Kory, Jennifer A. Hibberd, Juan J. Chamie-Quintero**

« Background: Ivermectin has demonstrated different mechanisms of action that potentially protect from both coronavirus disease 2019 (COVID-19) infection and COVID-19-related comorbidities. Based on the studies suggesting efficacy in prophylaxis combined with the known safety profile of ivermectin, a citywide prevention program using ivermectin for COVID-19 was implemented in Itajaí, a southern city in Brazil in the state of Santa Catarina. The objective of this study was to evaluate the impact of regular ivermectin use on subsequent COVID-19 infection and mortality rates.

**Results: Of the 223,128 citizens of Itajaí considered for the study, a total of 159,561 subjects were included in the analysis: 113,845 (71.3%) regular ivermectin users and 45,716 (23.3%) non-users. Of these, 4,311 ivermectin users were infected, among which 4,197 were from the city of Itajaí (3.7% infection rate), and 3,034 non-users (from**

**Itajaí) were infected (6.6% infection rate), with a 44% reduction in COVID-19 infection rate** (risk ratio [RR], 0.56; 95% confidence interval (95% CI), 0.53-0.58;  $p < 0.0001$ ). Using PSM, two cohorts of 3,034 subjects suffering from COVID-19 infection were compared. The regular use of ivermectin led to a 68% reduction in COVID-19 mortality (25 [0.8%] versus 79 [2.6%] among ivermectin non-users; RR, 0.32; 95% CI, 0.20-0.49;  $p < 0.0001$ ). When adjusted for residual variables, reduction in mortality rate was 70% (RR, 0.30; 95% CI, 0.19-0.46;  $p < 0.0001$ ). There was a 56% reduction in hospitalization rate (44 versus 99 hospitalizations among ivermectin users and non-users, respectively; RR, 0.44; 95% CI, 0.31-0.63;  $p < 0.0001$ ). After adjustment for residual variables, reduction in hospitalization rate was 67% (RR, 0.33; 95% CI, 0.23-0.66;  $p < 0.0001$ ).

**Conclusion: In this large PSM study, regular use of ivermectin as a prophylactic agent was associated with significantly reduced COVID-19 infection, hospitalization, and mortality rates. »**

<https://www.cureus.com/articles/82162-ivermectin-prophylaxis-used-for-covid-19-a-citywide-prospective-observational-study-of-223128-subjects-using-propensity-score-matching>

➤ **15 janvier 2022 : Vaccins - Dangers - Étude - « New Study Shows an Increase In Deaths In 145 Countries After COVID Vaccines Were Introduced »**

« A ground-breaking scientific study has found that countries recording the fewest COVID-19 deaths in 2020 before vaccinations, experienced “hundreds or thousands of percentage increases in total deaths” after COVID-19 vaccinations were introduced.

The study conducted by K. Beattie, of the University of Alberta, found that 89.84% of the 145 countries experienced a negative impact after COVID-19 vaccinations were made available.

This led to the conclusion that “The statistically significant and overwhelmingly positive causal impact after vaccine deployment [..] on the total deaths and total cases per million should be highly worrisome for policymakers (source).

Interestingly, it has been said that this study was made available before the U.S. Supreme Court hearing that blocked the OSHA vaccine or test mandate as the study found that in the United States, COVID-19 vaccinations account for an increased transmission rate of 38% and a 31% increase in death rate, it would have been criminal had the case not voted against the mandate rule.

### *The Study*

The researcher of the study “*Worldwide Bayesian Causal Impact Analysis of Vaccine Administration on Deaths and Cases Associated with COVID-19: A Big Data Analysis of 145 Countries*,” said that “policymakers and mainstream news anchors have promised the public that the COVID19 vaccine rollout worldwide would reduce symptoms, and thereby cases and deaths associated with COVID-19”.

Due to the vaccine rollout still being in progress a large amount of public data was available enabling analysis to be undertaken to determine whether the public policy treatment produced the desired effect. In order to do so, the researcher implemented a Bayesian causal analysis, comparing both pre-and post-treatment periods. »

- **17 janvier 2022 : Novak Djokovic - « The Monumental Sacrifice of Novak Djokovic » - Stacey Rudin**

« Defending Australian Open Champion Novak Djokovic was deported from Australia, the day before commencement of 2022 tournament play. He entered the country on a visa including a medical exemption based on recent Covid infection. Due to public outcry over “special treatment,” his visa was revoked upon arrival in the country, only to be reinstated by a court. It was later revoked by an immigration minister, whose decision was upheld by another court, sending Djokovic packing — potentially for three years.

This draconian act puts Djokovic at a serious disadvantage in his Grand Slam rivalry with Rafael Nadal, who is competing in Australia

this year after vocally supporting vaccines. Both champions, along with Roger Federer, currently hold 20 Grand Slam titles. Djokovic was favored to be the first to reach 21, but his decision to remain unvaccinated leaves Nadal alone with that opportunity for now. (Federer is out recovering from surgery.)

Djokovic was technically deported for not being vaccinated, but the decision lacks even a superficial “health and safety” justification. Djokovic already had Covid twice, once in early 2020 and again in December 2021. At the time of his deportation, he had been in Australia for ten days, and tested negative. He’s as healthy as a human being can be — you don’t earn “GOAT” status in the difficult sport of tennis any other way. »

### **Sur le narratif officiel**

« La matrice de cette narration que nous appelons « doxa du covid » peut se résumer de la façon suivante : **1) une pandémie menace soudainement la survie de l'humanité entière, 2) il n'existe aucune thérapeutique pour guérir les malades, 3) il faut confiner la totalité des populations, 4) la délivrance viendra uniquement d'un vaccin.** Et si notre enquête a été sans cesse attaquée, c'est parce qu'elle n'adhère pas à cette narration, estimant que les quatre éléments cités sont tous contestables d'un point de vue scientifique. »

### **Sur la mortalité toutes causes confondues - Surmortalité - Létalité**

« Mais la peur empêche de penser. En réalité, la dangerosité du coronavirus dépendant fondamentalement de l'état de santé de son hôte et non de sa nature intrinsèque, une confusion majeure s'est installée d'emblée entre le fait de mourir de la Covid et celui de mourir avec la Covid mais pour d'autres raisons (généralement appelées « comorbidités ») en réalité beaucoup plus déterminantes. **C'est la raison pour laquelle, pour apprécier la dangerosité globale de ce nouveau virus, et pour dépasser le problème des différences de comptage selon les pays, le seul raisonnement scientifiquement correct consiste à étudier année après année la mortalité toutes causes confondues.** Et ceci réduit considérablement l'évaluation de cette dangerosité ainsi que l'impact démographique de cette épidémie sur les populations. **À tel point que, contrairement à tout ce qui peut s'entendre dans le débat public depuis le début de la crise, il est possible d'affirmer que, en 2020, la plupart des pays occidentaux n'ont connu en fin de compte qu'une légère**

**surmortalité. Cette dernière est particulièrement faible (et même parfois nulle) dans plusieurs pays européens (Allemagne, Chypre, Danemark, Grèce, Finlande, Islande, Luxembourg, Norvège, Suède). Dans les autres, on constate bien une augmentation en 2020, qui n'a toutefois rien d'un cataclysme puisqu'elle ramène généralement la mortalité toutes causes confondues au niveau où elle était moins de dix ans auparavant<sup>31</sup>. Loin des imaginaires apeurés, la létalité du coronavirus (le nombre de morts par personnes infectées) est en réalité très faible : elle est comprise entre 0 et 1,5 % selon les pays<sup>32</sup>. En d'autres termes, une personne infectée a entre 98,5 et 100 % de chances d'y survivre. En dessous de l'âge de 70 ans, la létalité est même comprise entre 0 et 0,3 % (soit 99,7 % à 100 % de chances de survie). »**

### **Sur l'exception occidentale - Surmortalité**

**« Par ailleurs, la mortalité liée au nouveau virus n'a réellement concerné que deux des cinq continents : l'Europe (inclus la Russie) et l'Amérique (nord et sud). À quelques rares exceptions de pays près, l'Asie et, plus encore, l'Afrique et l'Océanie n'ont presque pas été touchées. La Covid (nom donné à la maladie parfois provoquée par l'infection au Sars-Cov-2) n'a donc concerné fondamentalement que la plupart des pays occidentaux. »**

### **Sur la surmortalité en France**

**« En France, par exemple, deux régions (Grand Est et Île-de-France) ont connu une forte surmortalité en 2020 et deux autres une surmortalité moins forte (Bourgogne-Franche-Comté et Hauts-de-France) tandis que toutes les autres (Bretagne, Corse, Nouvelle Aquitaine, Normandie, Occitanie, Centre-Val-de-Loire, Pays de la Loire et Sud) n'ont pas ou peu vu la différence avec les années antérieures. »**

### **Sur les populations touchées**

**« Ensuite, tandis que la plupart des personnes jeunes et en bonne santé se sont montrées soit naturellement immunisées, soit**

naturellement résistantes (c'est-à-dire protégées efficacement par leur système immunitaire), **les formes graves voire mortelles de Covid ont touché essentiellement deux catégories de personnes. D'abord les personnes âgées de plus 65 ans (avec une moyenne d'âge de décès située entre 83 et 85 ans), les classes d'âge précédentes n'ayant connu absolument aucune surmortalité depuis le début de l'épidémie.** Ensuite les personnes déjà malades pour d'autres raisons, on parle alors de « comorbidités » (au premier rang desquelles l'obésité et les maladies cardio-vasculaires qui l'accompagnent), ce qui tend par définition à exagérer les chiffres de la mortalité ainsi qu'on l'a déjà dit. »

### **Sur ce qu'on savait dès le mois de mars - Cas de l'Italie**

« Dès la fin du mois de mars 2020, au regard de la situation en Italie (pays touché précocement par rapport aux autres pays européens), des leçons cruciales de santé publique auraient dû être tirées. **Il était en effet déjà constaté 1) que la population-cible était celle des personnes les plus âgées (et l'Italie a la population la plus âgée d'Europe), 2) qu'un facteur important de propagation du virus était les grands rassemblements (match de football à Bergame), 3) que la pratique massive des tests en population générale permettait de repérer immédiatement les personnes infectées, de les isoler et d'éteindre l'épidémie (cas de la ville de Vò en Vénétie), 4) que les hôpitaux manquent structurellement de lits et sont chroniquement débordés l'hiver, qu'il faut donc éviter de les surcharger en en réservant l'accès aux personnes en état grave, les autres devant être soignées précocement en médecine de ville, 5) que les hôpitaux sont un lieu majeur d'infection tant pour les malades que pour le personnel soignant, des mesures d'hygiène drastiques devant y être appliquées et le personnel soignant systématiquement testé, 6) qu'une pénurie d'appareils d'oxygénation a coûté de nombreuses vies à l'hôpital. »**

## **Sur les confinements et leurs effets sur l'épidémie**

« Quelques mois plus tard, la publication d'une étude s'intéressant à l'impact des couvre-feux et du second confinement ne sera au contraire pas médiatisée. Il est vrai qu'elle montrait que la courbe du nombre de contaminations quotidiennes s'était inversée avant l'entrée en vigueur de ces mesures politiques. Et ceci corroborera les principales études internationales. **Toutes ces études portant sur l'année 2020 montrent globalement que la dynamique de l'épidémie dépend avant tout du climat ainsi que de la proportion des personnes très âgées au système immunitaire affaibli dans l'ensemble d'une population, et non de la nature ni de la date des mesures de confinement prises par les gouvernements.** Au demeurant, les pays qui ont imposé à leur population les confinements les plus durs et les plus longs (le Pérou et l'Argentine) figurent également dans le triste sommet de classement mondial officiel de la mortalité liée au Covid. »

## **Sur l'absence de soins - Paracétamol - Bureaucratie - Organisation du Chaos**

« Or ce gouvernement et ces autorités sanitaires ont émis en guise de directives médicales d'urgence (medical guidelines) les consignes suivantes : « Je suis atteint par le coronavirus et je dois rester chez moi jusqu'à ma guérison. En général, la guérison intervient en quelques jours avec du repos et, si besoin, avec un traitement contre la fièvre. Je peux prendre du paracétamol pour faire baisser la fièvre, Je ne dois pas prendre d'anti-inflammatoires comme l'ibuprofène sans avis de mon médecin. Je téléphone à mon médecin si j'ai un doute sur l'évolution de ma maladie. Si j'ai des difficultés à respirer, j'appelle immédiatement le 15 ». **Dans les médias, les médecins « officiels » déclineront cette (dramatique) consigne comme par exemple ici, sur Europe 1 : « En cas de fièvre, de douleurs à la gorge ou articulaires, il n'y a qu'une seule chose à prendre : le paracétamol ».** Quant aux antibiotiques, « ils ne sont d'aucune utilité. En cas de surinfection, les médecins décident de donner des antibiotiques, mais ce sera un traitement réservé plutôt à l'hospitalier. [...] Les antibiotiques n'ont absolument pas leur place dans le traitement du coronavirus ». Une telle attitude

constitue un refus dogmatique de prendre en charge et de soigner. En effet, le paracétamol est un anti-douleur qui soulage un symptôme mais ne soigne pas une maladie. Il présente de surcroît une dangerosité certaine (et bien supérieure à celle de l'hydroxychloroquine) en cas de surdosage. **Quant au refus des antibiotiques et des anti-inflammatoires, il confine à un dogme idéologique totalement irresponsable et constitue une dramatique erreur médicale. Car si les antibiotiques n'ont pas d'action antivirale, ils ont en revanche une forte action anti-bactérienne et/ ou anti-inflammatoire. Et la Covid réside précisément dans un emballement du système immunitaire provoquant une inflammation des voies respiratoires que l'organisme ne parvient plus à contrôler seul.** Au même moment, l'IHU de Marseille proposera une véritable thérapie précoce associant un antiviral et immunomodulateur (l'hydroxychloroquine, plus connu sous la marque Plaquénil, couramment utilisé contre le paludisme et les rhumatismes inflammatoires, ayant de surcroît déjà fait ses preuves contre les coronavirus<sup>58</sup>) avec un antibiotique de la famille des macrolides aux propriétés anti-bactérienne et anti-inflammatoire (l'azithromycine, plus connu sous la marque Zithromax, couramment utilisé contre les infections des voies respiratoires). »

### **Sur les succès de l'IHU de Marseille - Comparaison avec le reste de la France - Mortalité**

« Au terme de l'année 2020, sur une cohorte de près de 10 500 personnes testées positives et prises en charge à l'IHU avec ou sans la bithérapie proposée, la mortalité générale est de 0,15 % et elle tombe à 0,06 % (soit 2,5 fois moins) chez celles qui ont reçu le traitement<sup>59</sup>. En France, en moyenne nationale, elle est pourtant de 1,6 % (soit plus de dix fois supérieure à celle constatée dans la cohorte de Marseille sur l'ensemble des malades<sup>60</sup>). Quant à la stratégie nationale consistant à laisser se dégrader la santé des malades au motif que la plupart d'entre eux se rétabliraient d'eux-mêmes et à hospitaliser les autres une fois les symptômes de détresse respiratoire devenus trop forts, elle

**a conduit au désastre que résume le taux de 20 % de mortalité hospitalière des patients Covid. »**

### **Sur les soins efficaces - Anti-inflammatoires**

« Au même moment (fin février, début mars 2020), nombre de médecins généralistes s'étaient émancipés du refus de soin en quoi consiste la simple prescription de paracétamol. **Partant du constat qu'ils avaient affaire à une inflammation des voies respiratoires, ils ont utilisé ces mêmes antibiotiques (les macrolides) avec de très bons résultats que nous avons rapportés dans un entretien après avoir interviewé une dizaine d'entre eux<sup>62</sup>. Ainsi cette généraliste de l'Isère, avec laquelle nous ferons le point sur sa patientèle Covid : 350 patients symptomatiques traités principalement au Zithromax, 4 hospitalisations (soit 1,1 %), 0 décès.** Malgré une interview précoce dans la presse locale, elle tiendra par la suite à rester cependant anonyme car sera menacée de sanctions par l'Ordre des médecins si elle parlait de nouveau à des journalistes. »

« Enfin, nous avons également publié l'article d'un groupe de médecins s'occupant notamment d'un EHPAD en région parisienne, qui a soigné avec le protocole de l'IHU de Marseille et n'a connu aucune surmortalité en 2020 par rapport aux années antérieures. »

### **Absence de soins - Guerre contre les remèdes - Rivotril & Euthanasie - Crimes**

« Ici réside probablement la faute la plus grave (car la plus mortifère) de ces gouvernements occidentaux qui, comme en France, ont donc donné comme consigne fondamentale aux médecins généralistes de ne pas soigner leurs malades. Le résultat se mesure dans les données statistiques de l'Assurance maladie, qui enregistrent mensuellement les prescriptions médicamenteuses. **On y constate que les prescriptions de macrolides et d'hydroxychloroquine se sont envolées en mars 2020 avant de quasiment disparaître en avril et mai. Et on y observe aussi, à l'inverse, une explosion des prescriptions de Rivotril étrangement autorisées à titre dérogatoire dans les EHPADs par un**

**décret spécial du Premier ministre Édouard Philippe en date du 28 mars 2020<sup>71</sup>. Or le Rivotril est un médicament antiépileptique dont il suffit de lire la notice d'emploi (ou de consulter le Vidal) pour s'apercevoir qu'il est au contraire déconseillé d'une part chez les personnes très âgées, d'autre part chez les personnes souffrant d'insuffisances cardiaques et respiratoires. Il est donc légitime de se demander si son usage, au cœur de l'épidémie du printemps 2020, n'a pas en réalité correspondu à une forme d'euthanasie n'osant pas dire pas son nom. »**

**« En d'autres termes, en France, le gouvernement a d'une part empêché les médecins généralistes de soigner précocement les malades de la Covid, d'autre part autorisé en quelque sorte leur euthanasie lorsqu'ils arrivaient à l'hôpital dans un état désespéré. Et il faudrait le soutenir en répétant après lui qu'on ne pouvait pas faire mieux ? Ne devrait-on pas plutôt parler de non-assistance à personnes en danger ? »**

### **Sur la vitamine D**

**« Le comble est que le gouvernement et les agences sanitaires officielles ne seront pas même capables de recommander d'urgence la vitamine D que l'on sait depuis longtemps essentielle pour renforcer les défenses immunitaires, tant en prévention qu'en cours de maladie. C'était pourtant la mesure la plus simple, la plus sûre, la plus immédiate et la moins coûteuse. »**

### **Sur le cas de la France - Libertés**

**« Des chercheurs en science politique de l'Université d'Oxford ont créé un programme de recherche (baptisé « Covid-19 Government Response Tracker ») et un site Internet dédié qui compare les politiques publiques mises en œuvre face à la crise dans 180 pays du monde, à travers 23 indicateurs. Et, dans le contexte actuel, il faut préciser qu'ils ne sont pas suspects de vouloir critiquer en quoi que ce soit la légitimité de ces mesures, bien au contraire. Ce travail permet de cartographier et de visualiser**

l'évolution dans le temps (depuis janvier 2020) de ces politiques publiques dont le degré de sévérité (strictness) est mesuré sur une échelle allant de 0 à 100. **On y constate que, à l'exception de l'été 2020, la France figure dans le peloton de tête des pays les plus restrictifs de libertés, avec l'Italie, la Grèce, l'Irlande et certains pays d'Europe de l'Est (Russie, Ukraine, Albanie, Moldavie). La France a ainsi été l'un des pays européens les plus restrictifs en termes de libertés privées et publiques, qu'il s'agisse des cérémonies religieuses, des enterrements, des mariages, des ouvertures de commerces, de lieux culturels, des bars et restaurants, des horaires des couvre-feux, etcetera. »**

### **Sur le classement de la France par The Economist - Sur la démocratie**

« Autre symptôme de notre époque, **la France est, avec le Portugal, l'un des deux pays à avoir quitté en 2020 le premier groupe (full democracies) dans le classement mondial du niveau de démocratie proposé chaque année par The Economist.** Il faut dire que peu de pays ont poussé aussi loin la sophistication des interdits et la réalité de leur surveillance policière. Donnons-en un exemple des plus concrets. »

« Dès le premier confinement, le gouvernement français n'a pas émis des recommandations à destination de la population, mais des obligations sous peine de sanctions pénales. **La France est ainsi, à notre connaissance, le seul pays occidental à avoir mis en place un système d'attestation de sortie auto-rédigées à présenter obligatoirement pour aller faire ses courses, pour aller au travail, accompagner quelqu'un chez le médecin et même faire du sport, pour une durée maximale d'une heure et dans un rayon de 1 km autour de son domicile. »**

« En France, **aux termes de la loi sur l'état d'urgence sanitaire du 23 mars 2020, une amende de 135 euros était donc prévue, qui pouvait monter jusqu'à 1 500 euros en cas de récidive dans les 15 jours et même devenir un délit (et non**

**plus une contravention) passible de 3 750 euros d’amende et 6 mois de prison en cas de récidive à trois reprises dans le mois.** Et ceci n’a pas été une mesure symbolique. En avril 2021, le ministère de l’Intérieur annonça ainsi que, en un an, les policiers et les gendarmes avaient dressé plus de 2,2 millions de contraventions de ce type. »

« l’on a même constaté des cas de **verbalisation de personnes SDF** pour non-respect de l’obligation de rester confiné chez soi. »

### **Sur la bureaucratie française et l’absurdité des mesures**

« Comment qualifier autrement un pays dans lequel la bureaucratie a trouvé le moyen de modifier les règles de vie sociale à 38 reprises entre la fin du mois d’octobre 2020 et le début du mois d’avril 2021, soit une modification tous les quatre jours en moyenne ? Un pays dans lequel les hauts fonctionnaires ont pensé et écrit des textes réglementaires entrant dans des détails sibyllins tels que ceux figurant dans les annexes du décret du 29 octobre 2020 prescrivant les « mesures générales nécessaires pour faire face à l’épidémie de covid-19 dans le cadre de l’état d’urgence sanitaire » et définissant quatre catégories de masques réglementaires dont les masques réservés à des usages non sanitaires, devant eux-mêmes répondre à quatre caractéristiques réglementaires dont l’une est elle-même divisée en trois sous-caractéristiques qui imposent une ‘efficacité de filtration vers l’extérieur des particules de 3 micromètres émises [soit] supérieure à 90 %, une respirabilité qui [permette] un port pendant un temps de quatre heures et une perméabilité à l’air supérieure à 96 litres par mètre carré et par seconde, pour une dépression de 100 pascal’ ».

**« Dans le même ordre d’idées, qui pouvait comprendre que la raison sanitaire lui interdisait de monter dans un TGV sans « passe sanitaire », tandis qu’il pouvait prendre autant de fois qu’il le souhaitait le métro ou un TER ? Qui pouvait comprendre que, au même moment et dans un même supermarché, il pouvait accéder à certains rayons mais pas à d’autres décrétés ‘non-essentiels’ » ?**

➤ **17 janvier 2022 : Grèce - Discrimination contre les Non-Vaccinés - Sanctions - « Covid live: unvaccinated over-60s face monthly fine in Greece »**

« Greece on Monday imposed a vaccination mandate for people over the age of 60, as coverage remains below the EU average and a recent rise in infections has sustained pressure on hospitals, the Associated Press reports.

Older people who fail to get vaccinated will face penalties, starting at a €50 (\$57) fine in January and followed by a monthly fine of €100 (\$114) after that. »

## ➤ 17 janvier 2022 : Vaccins - Dangers - Augmentation du Nombre de Morts - Brian Shilhavy - « Up to 65% Increase in Deaths Among 18-49 Year Olds in the U.S. During 2021, the Year of the Experimental COVID "Vaccines" » - Brian Shilhavy

« I did my own investigation to corroborate what he was reporting, and examined the number of deaths the CDC was reporting through

December, 2020, before they revised their website and changed the total number of people who died in 2020, the year the pandemic scam started, which clearly showed that total deaths in 2020 were about the same as the previous two years, and that all they basically did was eliminate most of the flu deaths and blame those on COVID-19.

The result of this investigation was that we saw about an additional 400,000 deaths in 2021, the year of the COVID-19 vaccine roll-out.

See:

[2021: COVID Deaths Increase, Flu Deaths Disappear, 400,000+ More Total Deaths than 2020](#)

Since publishing that report, [Petr Svab of the Epoch Times](#) has also done an investigation on this issue, looking at death certificates from the CDC website of people between the age of 18 and 49 in 2021.

He examined the data by state, and he found that in some states the deaths in this age group had increased by as much as 65% compared to the same period in 2018 and 2019.

Here are the two articles he published that report this:

[EXCLUSIVE: Nationwide Surge In Deaths Among People Aged 18-49: A State by State Overview](#)

[EXCLUSIVE: States Investigating Surge in Mortality Rate Among 18-49-Year-Olds, Majority Unrelated to COVID-19](#)

If you hit a pay wall, ZeroHedge News has also published them:

➤ **19 janvier 2022 : Facebook - Censure - Données Erronées - Fact Checking - Médias - BMJ - « Facebook versus the BMJ: when fact checking goes wrong » - BMJ**

*The BMJ* has locked horns with Facebook and the gatekeepers of international fact checking after one of its investigations was wrongly labelled with “missing context” and censored on the world’s largest social network. **Rebecca Coombes** and **Madlen Davies** report.

On 3 November Howard Kaplan, a retired dentist from Israel, posted a link to a *BMJ* investigation article in a private Facebook group.<sup>1</sup> The investigation reported poor clinical trial research practices occurring at Ventavia, a contract research company helping to carry out the main Pfizer covid-19 vaccine trial.<sup>2</sup>

The article brought in record traffic to *bmj.com* and was widely shared on Twitter, helping it achieve the second highest “Altmetric” score of all time across all biomedical publications.<sup>3</sup> But a week after his posting Kaplan woke up to a message from Facebook (**fig 1**).

« “The Facebook Thought Police has issued me a dire warning,” he wrote in a new post. “Facebook’s ‘independent fact-checker’ doesn’t like the wording of the article by the BMJ. And if I don’t delete my post, they are threatening to make my posts less visible. Obviously, I will not delete my post . . . If it seems like I’ve disappeared for a while, you’ll know why.”<sup>4</sup>

Kaplan was not the only Facebook user having problems. Soon, several *BMJ* readers were alerting the journal to Facebook’s censorship. Over the past two months the journal’s editorial staff have been navigating the opaque appeals process without success, and still today their investigation remains obscured on Facebook. »

« Four prominent scientists who played key roles in shaping the public narrative around the origin of COVID-19 received substantial increases in grant money from the National Institute of Allergy and Infectious Diseases (NIAID), headed by Dr. Anthony Fauci, in the subsequent two years, a review of funding data by The Epoch Times has found.

Three of these scientists—Kristian Andersen, Robert Garry, and Michael Farzan—were advisers to a teleconference organized by Fauci held on Feb. 1, 2020, in response to increasing public questions about the origin of the virus.

The scientists were also instrumental in the publication of Proximal Origin, a highly influential paper that promoted a natural origins theory for SARS-CoV-2, the virus that causes COVID-19, and has been frequently cited by the government and media.

Emails released under Freedom of Information Act requests, showed that the scientists had told the senior members of Fauci's teleconference that they were 60 to 80 percent sure that COVID-19 had come out of a lab. »

« On Thursday 13<sup>th</sup> January 2022, at a hearing in the High Court[1] in London, evidence was presented showing a significant increase in the number of young male deaths following roll out of the Covid-19 vaccinations compared with the prior five-year average between 2015 and 2019. It is important to look at male deaths separately, given what is known about higher risks from myocarditis in young males.

Between 1<sup>st</sup> May to 24<sup>th</sup> December 2021 there were:

- 402 registered deaths in 15–19-year-old males, 65 more than the 337 five-year average;
- by contrast, 163 registered deaths in females, 12 less than the 175 five-year average; and
- combining those, 565 deaths of males and females registered in total, 53 more than expected.

The Office for National Statistics has accepted that the increase in young male deaths is a statistically significant increase, with the

mortality rate falling outside the expected confidence intervals from earlier years' data. »

➤ **20 janvier 2022 : Origine du Virus - Fauci - Manipulation - Fraude - « New Emails Expose Fauci's Role In Shaping Highly Influential Paper That Established COVID "Natural Origin" Narrative » - Jeff Carlson & autre**

« New evidence has emerged that suggests that Dr. Anthony Fauci not only initiated efforts to cover up evidence pointing to a lab origin of SARS-CoV-2 but actively shaped a highly influential academic paper that excluded the possibility of a lab leak.

Fauci's involvement with the paper wasn't acknowledged by the authors, as it should have been under prevailing academic standards. Neither was it acknowledged by Fauci himself, who denied having communicated with the authors when asked directly while testifying before Congress last week.

The article, Proximal Origin, was co-authored by five virologists, four of whom participated in a Feb. 1, 2020, teleconference that was hastily convened by Fauci, who serves as director of the National Institute of Allergy and Infectious Diseases (NIAID), and Jeremy Farrar, who heads the UK-based Wellcome Trust, after public reporting of a potential link between the Wuhan Institute of Virology in China and the COVID-19 outbreak.

The initial draft of Proximal Origin was completed on the same day the teleconference, which wasn't made public, took place. Notably, at least three authors of the paper were privately telling Fauci's teleconference group both during the call and in subsequent emails that they were 60 to 80 percent sure that COVID-19 had come out of a lab. »

## ➤ **20 janvier 2022 : UK - Vaccins - Dangers - Chiffres Officiels - « Latest Public Health Data proves the Covid-19 Vaccines INCREASE the risk of Infection, Hospitalisation and Death due to Covid-19 »**

**« The latest Public Health data published in the UK confirms that the double vaccinated population are more likely to catch Covid-19, more likely to be hospitalised with Covid-19, and more likely to die due to Covid-19 than the not-vaccinated population, despite the Covid-19 injections allegedly reducing the risk of hospitalisation and death by up to 95%.**

Latest Public Health Data proves the Covid-19 Vaccines INCREASE the risk of Infection, Hospitalisation and Death due to Covid-19

Public Health Scotland (PHS) publish a weekly Covid-19 Statistical Report containing data on Covid-19 cases, hospitalisations, and deaths over a period of four weeks, and their latest report confirms what we've been trying to inform the public of for months – the Covid-19 vaccines do not work and make the recipients worse.

For months authorities have used the rates per 100,000 population to justify that the Covid-19 vaccines are effective, but we can guarantee they will now no longer use this metric because the rates

per 100,000 population have been highest among the double vaccinated population since at least the middle of December 2021.

Table 14 of the latest PHS report shows the number of confirmed Covid-19 cases by vaccination status between 18th December 2021 and 14th January 2022, and the table shows that cases among the double vaccinated population outnumber cases among the not-vaccinated population by approximately 4 to 1. »

➤ **24 janvier 2022 : Remèdes - Ivermectine - Étude - « Large, Peer-Reviewed Research Study Proves Ivermectin Works Against COVID-19 » - FLCCC Alliance**

« The study was conducted in Itajaí, a port city in the state of Santa Catarina, between July and December 2020. Study authors include FLCCC physicians Dr. Flavio Cadegiani and Dr. Pierre Kory. Lead author Dr. Lucy Kerr was approached by the mayor of Itajaí, after the city began to experience a severe outbreak of COVID.

The entire population of Itajaí was invited to participate in the program, which involved a medical visit to compile baseline, personal, demographic, and medical information. In the absence of contraindications, ivermectin was offered as a preventative treatment, to be taken for two consecutive days every 15 days at a dose of 0.2 mg/kg/day.

Of the 223,128 citizens of Itajaí considered for the study, a total of 159,561 subjects elected to participate: over 70% opted to take ivermectin, and 23% chose not to.

The study found a 44% reduction in COVID-19 infection rate in favor of the group that took ivermectin (3.5% versus 8.2%).

In cases where a participating citizen of Itajaí became ill with COVID-19, they were recommended not to use ivermectin or any other medication in early outpatient treatment. Of those who did become infected, two equal-sized, highly matched groups (one that used ivermectin as a prophylaxis and one that did not) were compared. The regular use of preventative ivermectin led to a 68% reduction in COVID-19 mortality (0.8% versus 2.6%), and a 56% reduction in hospitalization rate (1.6% versus 3.3%). »

➤ **24 janvier 2022 : UK - Covid - Nombre de Morts - « Nombre de «vrais» morts du Covid: révélé au Royaume-Uni, fera-t-il tout basculer au niveau mondial ? » - Covidhub.ch**

**« La bombe a été lâchée par l'Office national des statistiques britannique: les décès dus purement au Covid sont presque dix fois moins nombreux qu'annoncé.** De quoi remettre en question la réalité de la pandémie et la justification de mesures aux impacts dévastateurs. En Suisse, le président se réfugie derrière l'OMS et le ministre de la Santé évoque la fin du pass.

Sur la chaîne indépendante GB News, le 19 janvier dernier, le souverainiste Nigel Farage a annoncé avoir fait usage du droit à l'information libre et adressé une requête à l'Office national des statistiques britannique (ONS) pour obtenir le nombre de décès dus « purement » au Covid, sans autre comorbidité (underlying cause).

Autrement dit, il a exigé de connaître le nombre des « vrais » morts DU Covid (et non AVEC le Covid).

**La réponse : 17'371. Au lieu des quelque 155'000 affichés dans les données « officielles ». Soit presque dix fois moins. »**

<https://www.covidhub.ch/le-nombre-de-vrais-morts-du-covid-revele-au-royaume-uni-le-sujet-fera-t-il-tout-basculer/>

➤ **24 janvier 2022 : Vaccins - Dangers - Enfants - « Les enfants sacrifiés du covid: génération meurtrie à travers isolement, masque et vax extorqué » - Par Gérard et Nicole Delépine**

« Mais il est bien vite apparu que l'objectif de la pandémie mise au point par quelques milliardaires au forum de Davos, annoncé et répété par l'évènement Event 201 et mis en œuvre par la majorité des 194 pays signataires du conseil mondial de l'OMS [2] n'était pas médical, mais politique. Les enfants, notre avenir, en sont les victimes innocentes engendrant de nombreux troubles immédiats et probablement à long terme. C'est la première fois que l'on voit des enfants de neuf ans et moins se suicider, démonstration d'une société devenue folle et profondément malade. Et le massacre se poursuit.

Après le confinement, les mesures inutiles de distanciation à l'école, l'obligation de port de masques inefficaces et toxiques encore à l'heure actuelle. Alors que l'épidémie est terminée [3] et que les gouvernants tentent de prolonger la panique avec le petit variant omicron que ses découvreurs affirment très bénin, l'épouvantable propagande pour imposer, extorquer aux familles le consentement pour une injection génique expérimentale dont ils ne savent rien, se répand comme une ignominie supplémentaire contre les petits.

**Les adolescents poussés à l'injection sans le consentement de leurs parents dès 16 ans et pour les plus jeunes avec seulement celui d'un parent, ont déjà cédé au chantage pour pouvoir continuer à sortir, à danser ou boire une bière avec les copains sans entrave.** On leur disait que ce pseudovaccin était inoffensif et qu'il fallait « faire confiance à la science ». A laquelle ? A la véritable science qui cultive le doute et progresse grâce aux controverses, ou bien au scientisme des marchands du temple vaccinal qui interdit tout débat démocratique ? A la science des vrais

docteurs au chevet des malades, diffamés, vilipendés, ou à celle des marchands de tapis qui s'expriment en permanence sur tous les médias, propriétés des milliardaires actionnaires des big pharmas producteurs des injections miracles ? Et les catastrophes s'accumulent déjà avec les nombreux contre-performances, malaises et décès de grands sportifs que les efforts intenses rendent plus rapidement sensibles aux myocardites et à l'attaque de leurs vaisseaux par la protéine spike que l'injection leur fait fabriquer. Constatant le nombre de myocardites, de nombreux pays comme le Japon stoppent l'injection tragique. »

- **25 janvier 2022 : Remèdes - Traitements Précoces - Différences entre Pays - « Situation sanitaire mondiale le point au 22 janvier 2022 : pays avec traitement précoce, versus les tout vax » - Par Gérard Delépine**

« L'argument le plus fréquemment utilisé par les médias et le pouvoir pour justifier la politique sanitaire qui nous empêche de vivre libre est : *« tous les pays pratiquent la même politique »*.

**Mais cette affirmation est mensongère : près de la moitié des pays du monde (dont l'Inde, les pays d'Afrique tropicale, la Chine, la Malaisie) ont utilisé des traitements précoces, permettant des comparaisons solides avec les pays occidentaux soumis à une dictature sanitaire du tout injection.**

Lors des comparaisons, pour évaluer l'efficacité des politiques anti-covid, nous utilisons les données officielles publiées par l'OMS avec, pour étalon la mortalité mondiale cumulée au 11/1/2022 qui atteint 693/Million.

Globalement l'analyse des données de l'OMS est porteuse d'espoir en objectivant l'efficacité des traitements précoces et/ou préventifs utilisés entre autres en Afrique et en Inde et la très grande bénignité d'Omicron qui va sauver les pays soumis à la dictature vaccinale.

## **L'Afrique tropicale démontre que les traitements précoces sont efficaces**

Certains pays africains par choix et/ou nécessité n'ont pas ou très peu vacciné et ont utilisé des traitements anciens et bon marché (antipaludéens et Ivermectine) ou des plantes locales qu'ils utilisent depuis longtemps pour lutter contre le paludisme et de nombreuses parasitoses (*Artemisia annua*).

En janvier 2022, l'OMS recense en Afrique, un peu plus de 7,8 millions de cas (2,2 % du total mondial) et 200 000 morts Covid (4 % du total mondial), alors qu'elle regroupe un peu plus de 17 % de la population mondiale. »

## **d'alerte donnent les chiffres des effets secondaires du « vaccin » dans l'armée étasunienne » - Daniel Horowitz**

« Lundi, au cours de l'audition de cinq heures du sénateur Ron Johnson sur un « COVID-19 : Second Opinion », l'avocat de l'Ohio Thomas Renz, qui représente des clients poursuivant les mandats de vaccination, a présenté des données de facturation médicale du DOD provenant de la base de données d'épidémiologie médicale de la défense (DMED) qui brosse un tableau choquant et inquiétant de la santé des membres de notre service en 2021.

Selon l'armée, DMED est l'outil Web de la Direction de la surveillance de la santé des forces armées (AFHSB) qui permet d'interroger à distance les données anonymisées sur le personnel et les événements médicaux des composantes actives contenues dans le système de surveillance médicale de la défense (DMSS). En d'autres termes, il contient chaque code de facturation médicale CIM pour tout diagnostic médical dans l'armée soumis à la facturation de l'assurance médicale pendant une période donnée. Trois médecins militaires ont présenté à Renz des données interrogées qui montrent un pic choquant et soudain dans presque tous les codes CIM pour les blessures courantes liées aux vaccins en 2021.

Dans une déclaration sous peine de parjure (NDLR : donc sous serment) que Renz prévoit d'utiliser devant un tribunal fédéral, les docteurs Samuel Sigoloff, Peter Chambers et Theresa Long – trois médecins militaires – ont révélé qu'il y a eu une augmentation de 300% des codes DMED enregistrés pour des fausses couches dans l'armée en 2021 par rapport à la moyenne sur cinq ans. La moyenne sur cinq ans était de 1 499 codes pour des fausses couches par an. Au cours des 10 premiers mois de 2021, elle était de 4 182. Comme Renz me l'a expliqué dans une interview avec TheBlaze, ces médecins ont interrogé les chiffres de centaines de codes de 2016 à 2020 pour établir une moyenne de base sur cinq ans. Ces codes concernaient généralement des affections et des blessures que la littérature médicale a établies comme étant des effets indésirables potentiels des vaccins.

M. Renz m'a dit que les chiffres tendaient à être remarquablement similaires pour toutes ces années précédentes, y compris en 2020, qui était la première année de la pandémie mais avant la distribution des vaccins. Mais en 2021, les chiffres sont montés en flèche, et les données de 2021 ne comprennent même pas les mois de novembre et décembre. Ainsi, certains responsables de la santé publique supposent que le COVID lui-même expose les femmes à un risque plus élevé de fausses couches. Mais le nombre de codes de fausses couches enregistrés en 2020 était en fait légèrement inférieur à la moyenne sur cinq ans (1 477). Cependant, ils n'étaient pas radicalement inférieurs à la moyenne dans une catégorie quelconque, au point que l'on puisse suggérer qu'il s'agit d'un reflet de la diminution des consultations médicales liée au confinement, qui a en quelque sorte conduit à une augmentation des diagnostics en 2021. »

- **26 janvier 2022 : Armée US - Vaccins - Dangers - Données - Lanceurs d'Alerte - « Whistleblowers share DOD medical data that blows vaccine safety debate wide open » - Daniel Horowitz**

« On Monday, during Sen. Ron Johnson's five-hour hearing on a "COVID-19: Second Opinion," Ohio attorney Thomas Renz, who has been representing clients suing the vaccine mandates, presented DOD medical billing data from the Defense Medical Epidemiology Database (DMED) that paints a shockingly disturbing picture of the health of our service members in 2021. »

« The database has all the ICD codes for both military hospital visits and ambulatory visits. The data presented by Renz so far is all from the query of ambulatory diagnosis data.

Aside from the spike in miscarriage diagnoses (ICD code O03 for spontaneous abortions), there was an almost 300% increase in cancer diagnoses (from a five-year average of 38,700 per year to 114,645 in the first 11 months of 2021). There was also a 1,000% increase in diagnosis codes for neurological issues, which increased from a baseline average of 82,000 to 863,000!

Some other numbers he did not mention at the hearing but gave to me in the interview are the following:

- myocardial infarction – 269% increase
- Bell's palsy – 291% increase
- congenital malformations (for children of military personnel) – 156% increase
- female infertility – 471% increase
- pulmonary embolisms – 467% increase »

➤ **26 janvier 2022 : Armée US - Vaccins - Dangers - Données - « COVID Vaccines Causing Miscarriages, Cancer and Neurological Disorders Among Military, DOD Data Show »**

*« Attorney Thomas Renz on Monday told a panel of experts that data provided to him by three whistleblowers show COVID-19 vaccines are causing catastrophic harm to members of the U.S. military.*

Attorney Thomas Renz on Monday told a panel of experts that data provided to him by three whistleblowers show COVID-19 vaccines are causing catastrophic harm to members of the U.S. military while not preventing them from getting the virus.

Following Monday's panel discussion on COVID vaccines and treatment protocols, led by Sen. Ron Johnson (R-Wis.), Renz summarized data obtained from the Defense Medical Epidemiology

Database (DMED), the military's longstanding epidemiological database of service members.

The data show:

- Miscarriages increased 300% in 2021 over the previous five-year average.
- Cancer increased 300% in 2021 over the previous five-year average.
- Neurological disorders increased 1000% in 2021 over the past five-year average, increasing from 82,000 to 863,000 in one year. »

- **27 janvier 2022 : UE - Dictature Sanitaire - « Discrètement, le coup d'Etat de l'UE contre notre souveraineté sanitaire continue » - Le Courrier des Stratèges**

« Personne ne l'a vraiment relevé en France, mais le Conseil européen a pris une position cette semaine qui change considérablement la face du marché unique auquel nous appartenons.

On se souvient que, jusqu'ici, le marché unique était fondé sur la libre circulation des personnes. C'est même le principe de l'espace Schengen.

Depuis cette semaine, une exception de taille est introduite dans ce principe, sans qu'aucune autorité n'en ait référé aux citoyens : seuls les vaccinés pourront voyager au sein de l'Union.

C'est le sens de la “recommandation” adoptée par le Conseil européen, recommandation sur le statut juridique de laquelle nous nous interrogeons.

On retiendra ces informations publiques données par un Conseil qui n'a reçu aucun écho en France :

**En vertu de la nouvelle recommandation, les mesures liées à la COVID-19 devraient être appliquées en fonction du statut sanitaire de la personne plutôt que de la situation épidémiologique au niveau régional, à l'exception des zones où le virus circule à des niveaux très élevés (zones rouges foncées). Cela signifie que le facteur déterminant devrait être le certificat COVID numérique de l'UE du voyageur.**

Autrement dit, les restrictions à la liberté de circuler ne tiendront (ou ne devraient) plus (tenir) compte du risque que le voyageur soit ou non infecté, mais du fait qu'il soit vacciné ou non.

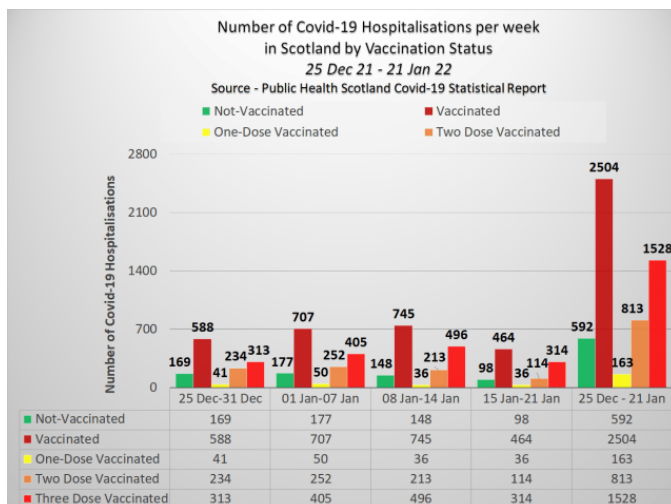

C'est le même délire qu'en France : un vacciné contagieux est moins dangereux qu'un non-vacciné non contagieux. »

- **28 janvier 2022 : Allemagne - Mesures Sanitaires - Erreur - Logiciel - « German Health Minister Says Tyrannical Covid-19 Restrictions For Unvaccinated Were Based on “Software Error” »**

**« After terrorising the unvaccinated for months, German Health Minister Karl Lauterbach is backing off and blaming his earlier statements of a “pandemic of the unvaccinated” on a “software error.” »**

In November 2021, news outlets were reporting an increase in “incident” numbers in Hamburg. The claim was that in just a few days, the case rate for Covid-19 grew from 111.6 people per 100,000

to 160 people per 100,000. As November progressed, that number grew to 209.2 cases per 100,000 people, only to jump at the end of the month to an all-time high of 223.3 cases per 100,000 people.

These incredibly high figures, which have now been revealed to be entirely manufactured, were used as an excuse to legitimise the covid restrictions called “2G.”

These measures involved requiring people to be either vaccinated or “recovered” from a positive covid test to enter shops, eat at restaurants or go to clubs. The unvaccinated were also told that they needed to avoid all social contact and stay away from the vaccinated. »

- **28 janvier 2022 : Justice Internationale - Nuremberg - Crimes contre l'Humanité - « Before the International Criminal Court (ICC). The Corona Virus "Vaccines". Nuremberg Code, Crimes against humanity, War Crimes and Crimes of Aggression" » - Hannah Rose, Dr. Mike Yeadon, Piers Corbyn, and et al.**

« **The Corona virus 'vaccines'** are an innovative medical treatment, which have only received temporary Authorisation under Regulation 174 of the Human Medicine Regulations Act (2012). The long-term effects and safety of the treatment in recipients are unknown. It is important to note that the CoronaVirus 'vaccines' are the world's first introduction to the synthetic m-RNA technology and all previous immunisations worked in a totally different manner, by way of introducing a deactivated or weakened virus to the body to trigger a natural arousal of the immune system against it. As detailed by Dr Mike Yeadon, the risks anticipated by this innovative medical treatment are hereby enclosed as Appendix 1 to this request. All Phase 3 COVID-19 vaccine trials are ongoing and not due to conclude until late 2022/early 2023. The vaccines are, therefore, currently experimental with only limited short-term and no long-term adult safety data available. In addition, they are using a completely new mRNA vaccine technology, which has never previously been approved for use in humans. The mRNA is effectively a pro-drug and it is not known how much spike protein any individual will produce. Potential late-onset effects can take months or years to become apparent. The limited children's trials undertaken to date are totally underpowered to rule out uncommon but severe side effects.

The Covid-19 ‘vaccines’ do not meet the requirements to be categorised as vaccines and are in fact gene therapy (Appendix 8). The Merriam-Webster dictionary quietly changed the definition of the term ‘vaccine’ to include components of the COVID-19 m-RNA injection. The definition of vaccine was specifically changed due to the Covid-19 injection on February 5th 2021. Dr Mike Yeadon, joint applicant on this request, asserts that claims calling the Covid-19 injections a ‘vaccine is public manipulation and misrepresentation of clinical treatment. It’s not a vaccination. It’s not prohibiting infection. It’s not a prohibiting transmission device. It’s a means by which your body is conscripted to make the toxin that then allegedly your body somehow gets used to dealing with it, but unlike a vaccine, which is to trigger the immune response, this is to trigger the creation of the toxin.’ MRNA uses the cell’s machinery to synthesize proteins that are supposed to resemble the SPIKE protein of the virus, which is what it uses to enter cells via the ACE2 receptor. These proteins are then identified by the immune system, which builds antibodies against them. The real concern is that these proteins could accumulate in the body especially in regions of high concentration of ACE2 receptors, such as the gonads. If the immune system then attacks the location where they accumulate, then you could be dealing with an auto-immune condition. »

- **28 janvier 2022 : Vaccins - Dangers - Fausses Couches - « COVID vaccines and pregnancy: 172,000 spontaneous abortions due to the vaccine » - Steve Kirsch**

« Basically, using rate data recently released from the Department of Defense, she computes an under reporting factor (URF) for VAERS for spontaneous abortions is 118. Since there are 3,527 reports of SA in the US in 2021, this represents 416,186 actual events. But a small number of those were not caused by the vaccine, somewhere around 1%.

Using the DMED data, the five-year average was 1,499 codes for miscarriages per year. During the first 10 months of 2021, it was 4,182. So that's **3.4X the baseline rate** (when extended to an annual rate).

I've notified the CDC of this, but I don't expect them to change their policy of recommending the vaccine to pregnant women.

Also note that pregnant women were NOT included in the vaccine trials. It is medical malpractice to recommend the vaccines to pregnant women. The CDC repeatedly declared them safe for pregnant women without complete data.

I don't expect the mainstream media to question the CDC on this at all. I'm sure they will all ignore it. »

- **28 janvier 2022 : Pfizer - Vaccins - Dangers - Essais - Fausses Couches - « “Pfizer Trials: All Injected Mothers Lost Their Unborn Babies” »**

« Look at table 6 from this Pfizer report. It is titled “Missing Information”. Its first heading under the topic “Missing Information” is “Use in pregnancy and lactation”. It includes this paragraph:

“Pregnancy outcomes for the 270 pregnancies were reported as spontaneous abortion (23), outcome pending (5), premature birth with neonatal death, spontaneous abortion with intrauterine death (2 each), spontaneous abortion with neonatal death, and normal outcome (1 each). No outcome was provided for 238 pregnancies (note that 2 different outcomes were reported for each twin, and both were counted).”

On the surface this states that of 270 pregnancies, there were 23 spontaneous abortions, 5 “outcomes pending”, 2 premature birth with neonatal death, 2 spontaneous abortions with intrauterine death, 1 spontaneous abortion with neonatal death, and 1 normal outcome. But note also “no outcome was provided for 238 pregnancies”.

So really we have no idea what happened with 243 (5 + 238) of the pregnancies of these injected women; they have just not been included in the report. What we do know is that of 27 reported pregnancies (270 subtract 243), there are 28 dead babies! This appears to mean that someone was pregnant with twins and that 100% of the unborn babies died.

Here is an excellent article by LifeSite News which goes into greater depth about these shocking revelations. LifeSite News cuts Pfizer some slack on the 5 “outcomes pending” which creates the possible impression that 87.5% of the babies of the injected women died. With all respect to LifeSite, I feel correct in not counting the 5 “outcomes pending” and hence arrive at the conclusion that 100% of the unborn babies died in the injected women for whom results are presented. »

➤ **2 février 2022 : Vaccins - Dangers - Taux de Décès - « Stunning German Analysis Finds that COVID-19 Vaccine Death Rates Are Far Higher than Previously Reported » - J. D. Heyes**

*« A shocking new analysis from a German researcher using data from several countries reveals that there have been “thousands” more “daily deaths” from COVID-19 vaccines than governments around the world are admitting, even as those same regimes continue to demand as many people as possible continue to get vaccinated.*

The analysis, from University of Regensburg **Prof. Christof Kuhbandner**, has revealed what he has described as an “extremely

alarming situation” involving “thousands” of people who “are dying of the vaccine daily without us even being aware of it,” according to a published report.

The mortality data, which was gathered from Austria, Germany, Israel and Britain, was compiled in an Austrian report broadcast by servus.tv after Kuhbandner “happened to come across a recent preprint study in the journal ResearchGate, where the authors examined the UK ONS vaccine mortality surveillance report,” the report noted further. »

➤ **2 février 2022 : UK - Vaccins - Dangers - Enfants - Mortalité - « British children up to 52 times more likely to die following a COVID shot: gov't report »**

« Britain’s Office for National Statistics (ONS) has [released data](#) indicating that children who received the COVID-19 jabs have

suffered a death rate 54 times greater than that of their un-jabbed counterparts.

In December, the ONS published age-standardized data on the mortality rates of individuals in 5-year age sets in Britain, grouped by their “vaccination” status for the COVID-19 shots. The data accounts for the period from January 1 to October 31, 2021.

The ONS tabulated “Monthly age-standardised mortality rates by age-group and vaccination status for deaths involving COVID-19, per 100,000 person-years” but presented the data only for ages 18 and over. However, the jabs are [available](#) to children as young as 12, and those children are [allowed](#) to receive the shot against their parents’ wishes. In limited cases, children as young as 5 have been given a reduced dosage of the shots.

Nevertheless, as [noted](#) by *The Exposé*, a separate table outlining “deaths and person-years by vaccination status” includes 5-year age groups from 10-years-old and up. From the data provided, a calculation of the mortality rate per 100,000 person-years can be made.

The rate per 100,000 person-years delineation is used in preference over the simpler 100,000 population calculation to better represent the mortality rates over a specific period of time, as people in one “vaccination” group – such as un-jabbed, single-jabbed, and double-jabbed – soon move into the next group.

Table 9 of the ONS report shows the “deaths and person-years by vaccination status and five-year age group” for the entire ten-month period. According to the report, the un-jabbed 10–14-year-old group represents 2,094,711 person-years, and the 15–19 age set 1,587,072 person-years over the same time. »

« We have heard of cases where adult patients in the US have been denied a life-saving heart transplant because they hadn't been vaccinated. But have you ever heard of a child being refused because their parents had been vaccinated?

Well, now we have: Politico EU reports that a **3-year-old Cypriot boy was denied a heart transplant by a hospital in Germany allegedly because his parents weren't "fully vaccinated"**.

**And it wasn't just Germany. The boy was turned away by hospitals in the UK and Israel** for the same reason. Finally, a Greek hospital was found to do the transplant, but the story is going viral anyway as the latest example of COVID restrictions run amok. »

- **3 février 2022 : Italie - Dictature Sanitaire - Libertés - « Italy's COVID Despotism Just Got Worse » - Matteo Salonia**

« The news from Italy has started to sound like good incipits for a dystopian fantasy novel or like a déjà vu recalling the Soviet Union. A couple of weeks ago, a new decree of the Draghi government established yet more rules restricting the lives of people who have not been injected with the latest vaccine booster and who therefore cannot show the latest version of the Green Pass. These second-class citizens, who have already been stripped of their right to move, work, and participate in a great number of social activities, are now forbidden from entering post offices to withdraw their pension, and they are to be allowed access to supermarkets only to buy “goods of primary necessity.” In other words, the Italian government decides what kind of food and what other goods (if any) these people will be able to purchase. It is unclear how exactly the government intends to enforce this new decree: Will we see policemen putting their hands into shoppers’ bags? Will bread be considered a “primary” good while shaving foam and candies will be seized? There is no limit to the madness. And a recent note from the executive to clarify the situation only made things worse: the state now decrees that the unvaccinated can actually also buy nonprimary goods in the few shops they are allowed to enter. For the time being. In other words, Italy is now a society where your sphere of action goes only as far as the prime minister’s website explicitly and graciously allows. Heading out for a stroll at the park? You better check the latest blog post from Mario Draghi to see if he explicitly grants you this freedom! »

➤ **7 février 2022 : Pfizer - Vaccins - Dangers - Enfants - Risques - « Pfizer Covid-19 Vaccine increases Children’s risk of Death by 5100% according to the Office for National Statistics »**

« Back on 20th Dec 21, the Office for National Statistics (ONS) published a dataset containing details on ‘deaths by vaccination status in England’ between 1st Jan and 31st Oct 21.

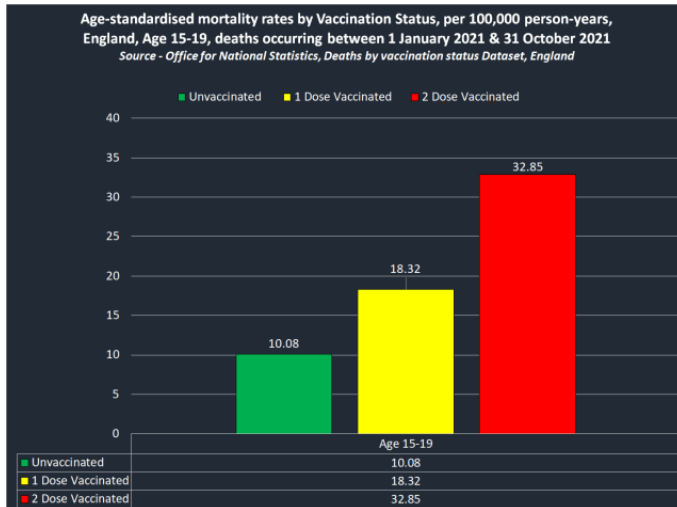

The ONS tabulated their “monthly age-standardised mortality rates by age-group and vaccination status for deaths per 100,000 person-years,” but presented only the data for individuals ages 18 and over.

Month	Age-group	Vaccination status	Number of deaths	Person-years	Age-standardised mortality rate per 100,000 person-years
May	18-39	Unvaccinated	153	651,561	25.6
May	18-39	Within 21 days of first dose	4	53,775	8.1
May	18-39	21 days or more after first dose	79	114,200	65.6
May	18-39	Within 21 days of second dose	26	50,840	47.0
May	18-39	21 days or more after second dose	44	79,515	55.2
May	40-49	Unvaccinated	213	109,872	221.0
May	40-49	Within 21 days of first dose	29	82,454	37.9
May	40-49	21 days or more after first dose	247	169,064	145.0
May	40-49	Within 21 days of second dose	55	46,398	114.4
May	40-49	21 days or more after second dose	100	60,846	164.0
May	50-59	Unvaccinated	350	49,609	717.2
May	50-59	Within 21 days of first dose	12	3,925	273.1
May	50-59	21 days or more after first dose	817	294,958	275.7
May	50-59	Within 21 days of second dose	205	104,827	190.7
May	50-59	21 days or more after second dose	378	92,554	399.9

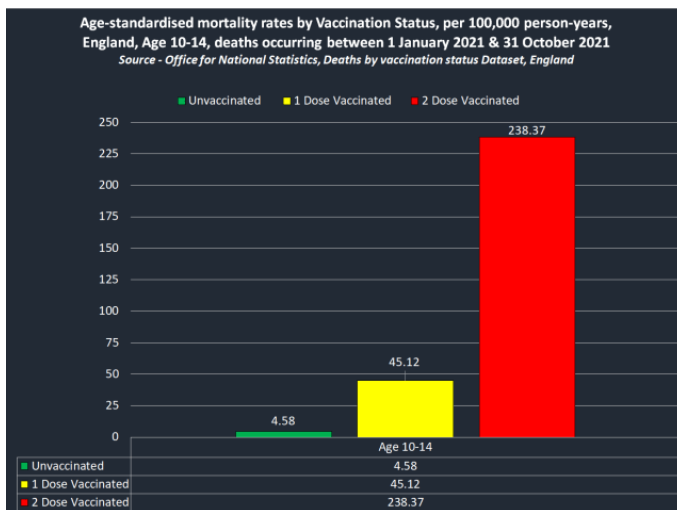

The vaccinations, on the other hand, are available to children as young as 12, who were allowed to receive the injection against their parents’ wishes. In some cases, children as young as five have been given a reduced dosage of the vaccines.

However, on table 9 of the ‘Deaths by Vaccination Status’ dataset, the ONS have inadvertently provided enough details on deaths among children and teenagers by vaccination status for us to calculate the mortality rates ourselves.

The data showed a massive increase in deaths among single-vaccinated and double-vaccinated children compared to their unvaccinated counterparts. For children aged 15 to 19, the risk of death increases by 82% following the first shot, and a shocking 226% following the second shot.

But things are much worse for 10 to 14-year-olds. The risk of dying increases by a mind-blowing 885% following the first shot, and then an earth shattering 5105% following the second dose.

This means that children between 10 and 14, who had at least one shot of the Covid-19 vaccine, were 10 times more likely to die between January and October 2021, while children who had the second dose were 52 times more likely to die. »

<https://dailyexpose.uk/2022/02/07/covid-vaccinated-children-5100-percent-more-likely-to-die/>

- **7 février 2022 : Remèdes - Ivermectine - Efficacité - Étude - « Preventive Use of Ivermectin Reduced COVID Mortality by 90%, Study Found »**

« A peer-reviewed study published last month found the prophylactic use of ivermectin reduced COVID mortality by 90% among more than 223,000 study participants in a town in Southern Brazil.

The study, published in the Cureus Journal of Medical Science, also found a 44% reduction in COVID cases among those who took the repurposed drug.

Between July 7, 2020, and Dec. 2, 2020, all residents of Itajaí were offered ivermectin. Approximately 3.7% of ivermectin users contracted COVID during the trial period, compared with 6.6% of residents who didn't take the drug.

Based on the results, Dr. Flavio Cadegiani, one of the study's lead authors, said, "Ivermectin must be considered as an option, particularly during outbreaks."

Dr. Pierre Kory told The Epoch Times the results of the study "should convince any naysayer. What they found was astounding."

Kory said:

"You would think this would lead to major headlines everywhere. And yet, nothing. And this is not new, this censorship of this highly effective science and evidence around repurposed drugs. The censoring of it, it's not new, it's just getting more and more absurd. And it has to stop." »

- **8 février 2022 : Vaccins - Dangers - « New research turns up yet more potential mRNA vaccine dangers » - Alex Berenson**

« The mRNA shots cause the body to make huge amounts of spike protein. Vaccine advocates have generally argued that those proteins remain bound to the cells where they were produced.

But the researchers also said they had found spike protein in the blood following mRNA shots at levels as high as those **produced by coronavirus infection itself**:

*At least some portion of spike antigen generated after administration of BNT162b2 becomes distributed into the blood. We detected spike antigen in 96% of vaccinees in plasma collected one to two days after the prime injection, with antigen levels reaching as high as 174 pg/mL. The range of spike antigen concentrations in the blood of vaccinees at this early time point largely overlaps with the range of spike antigen concentrations reported in plasma in a study of acute infection. »*

- **13 février 2022 : Fausse-Couches - Israël - Vaccins - Dangers - Étude - JAMA - « Stillbirths, Miscarriages and Abortions in Vaccinated vs. Unvaccinated Women » - Josh Guetzkow**

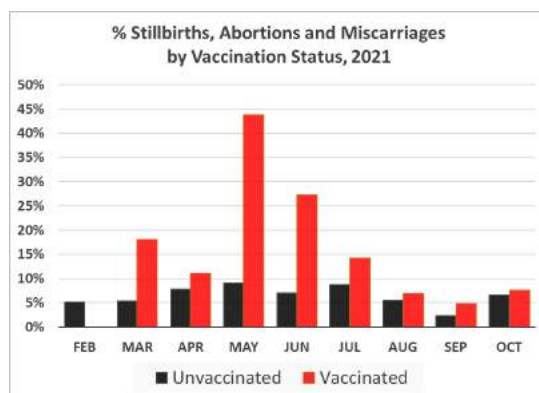

« Data from Rambam hospital in Haifa reveal a stillbirth, miscarriage and abortion (SBMA) rate of 6% among women who never received a COVID-19 vaccine, compared to 8%

**among women who were vaccinated with at least one dose (and never had a SARS-Cov-2 infection).<sup>1</sup>**

That's a statistically significant odds ratio of 1.36 (CI 1.0-1.9), meaning your odds of having a stillbirth, abortion or miscarriage are 1.36 times higher if you are vaccinated.<sup>2</sup>

**Another way of putting it is that the SBMA rate among vaccinated women was nearly 34% higher than the rate among unvaccinated women.** This difference is statistically significant at the 95% confidence interval based on a Chi-square test of significance.

One possible explanation is that older women and women with co-morbidities were more likely to get vaccinated, and that explains the difference. It's possible, but it has to be shown. This paper recently published in JAMA on live births based on Israeli electronic medical records shows that vaccinated and unvaccinated mothers were in many ways very similar. Vaccinated women were only about 1 year older on average than unvaccinated women in terms of average age (30.5 vs. 31.6 yrs) and if anything, the unvaccinated mothers were less healthy: more of them were obese and smoked; and they were far more likely to have had a SARS-Cov-2 infection during pregnancy. »

« Step 1: Even though the world has not had a major respiratory disease epidemic in almost a century, insist one is coming SOON and we have to swab every bat in China to figure what virus will cause it.

Step 2: When you can't find viruses capable of causing it, start making them more dangerous in a lab.

Step 3: When an epidemic finally breaks out IN THE CITY WHERE THE LAB IS, shout down anyone who mentions the connection. Instead spend two years instituting control measures that prove completely ineffective at stopping it - though very effective at ruining kids' mental health.

Step 4: Invent "vaccines" that work against the virus in a completely novel way, test them for *months*, and give them to more than a billion people.

Step 5: Be surprised when the vaccines turn out to be far more effective than the virus itself at causing immune imprinting and original antigenic sin.

Step 6: Wonder why the outbreak has lasted far longer than previous outbreaks, when neither control measures nor vaccines were used.

Step 7: Call anyone who points these unpleasant facts out a conspiracy theorist; when that doesn't work, censor them.

Step 8: Profit! »

➤ **15 février 2022 : Vaccins - Dangers - Jeunes - Étude - « The mRNA Covid shots are killing teenagers » - Alex Berenson**

« The journal of the College of American Pathologists has a stunning report today on the cases of two teen boys who died following mRNA Covid vaccines.

Both boys died in their sleep less than a week after the second dose, and neither had any known health conditions prior to death.

The report's lead author is Dr. James Gill, the chief medical examiner for the state of Connecticut and the 2021 President of the National Association of Medical Examiners.

Myocarditis requiring hospitalization is known to occur in up to 1 in 2,000 teenage boys and young men at rates following mRNA jabs - a rate far higher than the rate caused by Covid infection.

In these cases, autopsies of the two teenagers found evidence of myocarditis - heart inflammation - that appeared very different than the standard presentation of myocarditis. The report suggested a hyper-inflammatory cytokine response could have driven the damage. »

➤ **15 février 2022 : Vaccins - Dangers - Nombre de Morts - « How Many People Died from the Covid-19 Inoculations? » - Mark Skidmore**

Covid-19 inoculation-related fatalities:

- Assuming that all the respondents who know somebody who they believe died from the inoculation actually died from the inoculation, **estimated fatalities are about 308,000.**
- Subtracting out those who may have died regardless of inoculation yields an **estimated 260,000 inoculation-induced fatalities.** This is an initial first pass estimate—more evaluation is needed.

Factors associated with being inoculated:

- The likelihood of being inoculated is significantly less for those who identify themselves as African American, Hispanic, and Asian, and Republican or Independent. Democrats, Caucasians, and more the highly educated are more likely to be inoculated.
- Those who indicated that they obtain information about Covid-19 from alterative news sources were less likely to be inoculated. Those who obtain information from mainstream news and official government source are more likely to be inoculated.
- Knowing someone who experienced a significant health problem from the Covid-19 illness increased the likelihood of being inoculated.
- **Knowing someone who had been injured by the Covid-19 inoculation substantially reduced the likelihood of being inoculated.**

➤ **16 février 2022 : USA - Meurtres - Absence de Soins - Hôpitaux - Incitations Financières - Traitements - « How COVID Patients Were Over-Treated to Death » - Joseph Mercola**

« Perhaps the most shocking example I've come across is the case of a perfectly healthy man involved in a car accident. In a talk with Stew Peters on Rumble, Benjamin Gord claims to have been given an unknown knock-out drug by the attending EMT and woke up on life support in a COVID ward.

He pulled out the vent all by himself, as he was unharmed from the accident. When he demanded to know why he'd been placed on mechanical ventilation, the shocked staff told him he was being treated for COVID.

In other cases, patients have been put on COVID standard care even though they came in for something else. Patients are also being denied release and are basically held as prisoners in the hospital. Many are refused the right to deny treatment.

On the other hand, they're forced to accept do-not-resuscitate orders that they don't want. There are also reports of COVID patients being given potent central nervous system respiratory depressants otherwise known as "euthanasia cocktails" — combinations of sedatives like morphine, fentanyl and midazolam.<sup>3</sup>

The medical kidnapping and mistreatment of patients against their will has become so widespread, human rights attorney Thomas Renz asked the Truth for Health Foundation to set up a medical advisory team, called the COVID Care Strategy Team, to help families physically liberate their loved ones from hospitals where they're kept captive.<sup>4</sup>

### **Incentivizing the Killing of Patients**

While one can speculate about the ethics of hospital administrators and doctors all day long, one of the most obvious answers to how this

could have happened is that hospitals are receiving massive incentives to over-treat COVID patients to death. In the simplest terms, every patient has what amounts to a \$100,000+ bounty on their head. Hospitals receive bonus payments for:<sup>5,6</sup>

- **COVID testing and COVID diagnoses** — Hospitals receive a 20% "bonus" on top of the standard cost for the treatment of a COVID patient<sup>7</sup>

- **Admission of a "COVID patient"**

- **Use of remdesivir** — The U.S. government actually pays hospitals an additional bonus when they use remdesivir,<sup>8,9,10</sup> and that's in addition to the 20% upcharge. Remdesivir was developed as an antiviral drug and tested during the Ebola breakout in 2014. Results were beyond disappointing. In the early months of 2020, the drug was entered into COVID trials.<sup>11</sup>

Those trials were also beyond disappointing.<sup>12,13,14</sup> Not only was the drug ineffective against the infection but it also had significant and life-threatening side effects, including kidney failure and liver damage.<sup>15</sup> Despite its clear dangers and lack of effectiveness, the U.S. Food and Drug Administration authorized remdesivir for emergency use against COVID in May 2020,<sup>16</sup> and then gave it full approval in October 2020.<sup>17</sup>

- **Use of mechanical ventilation**, which CMS whistleblowers claim kill 84.9% of COVID patients within as few as 96 hours,<sup>18</sup> typically due to barotrauma<sup>19</sup> (trauma to the lungs from the elevated pressure).

- **COVID deaths** — In August 2020, former director of the U.S. Centers for Disease Control and Prevention, Robert Redfield, agreed hospitals had a financial incentive to overcount COVID deaths.<sup>20</sup>

According to Renz, hospitals are raking in a minimum of \$100,000 extra for each and every "COVID patient" when they follow the directive to only treat with remdesivir and ventilation. On the other hand, hospitals that refuse to follow this deadly protocol and use

things like ivermectin, antibiotics and steroids forfeit all government payments.

Still, financial incentives dictating drug treatment don't explain why some hospitals are now withholding basic nutrition and fluids, quite literally torturing – starving – the patients to death. Such cases make it clear that death simply must be the desired outcome. Why else would you withhold food and water?

Initially, these COVID incentives were justified as a way to make sure hospitals would not be financially destroyed by the pandemic as they were losing revenue from routine care and elective surgeries they could no longer provide.<sup>21</sup>

Now, however, it seems this payment scheme has created a kind of institutionalized killing machine, where hospital revenue is tied to patients dying in-hospital with a COVID label, be it true or false. »

« The Covid Scam started with social distancing and face masks. Based on scientific fraud, people were led to believe the horrific predictions of incompetent advisors to the government. Millions of people were to die if we didn't obey! And so... the people obeyed. Families were torn apart, societies were split. Everything that gave joy – singing, dancing, hugging, laughing – was prohibited. Instead, fear ruled the planet and turned it into a dark place. Midazolam and

morphine was used to purposefully euthanise many thousands of elderly people in care homes. Hold on to your seat as we prove, beyond a shadow of a doubt, that our world leaders arranged all of this during the lockdowns, so nobody would notice. Hard to believe? Then follow us... to part 19! »

➤ **17 février 2022 : Armée US - Données - Vaccins Dangers - Chiffres - Explosion des Pathologies - « Des données de l'armée américaine remettent en cause le discours sur la sécurité des vaccins » - FranceSoir**

**« Au cours d'une audition au Sénat organisée par Ron Johnson, l'avocat Thomas Renz, qui représente des clients attaquant les obligations vaccinales, a présenté les chiffres issus de la base de données d'épidémiologie médicale de la défense, qui montrent une explosion des pathologies des militaires américains pour l'année 2021, année où la vaccination a été mise en place dans tout le pays. »**

« Toute pathologies confondues, le nombre de maladies enregistrées était en moyenne de 2 millions par an, un nombre qui variait peu d'une année à l'autre. L'année 2021 a marqué un tournant puisque ce chiffre est passé à 21,5 millions pour les 11 premiers mois de l'année, ce qui représente une augmentation de 941%, alors que l'année n'était pas encore terminée. Cette explosion de la mortalité n'a pas eu lieu en 2020, année du Covid, mais en 2021, année de la vaccination de

masse, les membres de l'armée américaines étant vaccinés à hauteur de 96 %. Il est important de comprendre que ces chiffres ne représentent pas le nombre de personnes individuelles diagnostiquées avec diverses affections, mais le nombre total de codes de diagnostic renseignés. Une personne souffrant de maladie auto-immune va consulter plusieurs fois avec de multiples visites en ambulatoire ou hospitalisation, et ainsi accumuler plusieurs données de facturation médicale.

L'incidence des fausses couches dans l'armée a connu une augmentation de 300 % par rapport à la moyenne sur cinq ans. Celle-ci était de 1499 cas par an tandis qu'au cours des 10 premiers mois de l'année 2021, elle était de 4182. Un chiffre qui interroge, au regard des discours relayés par certains membres de la santé publique qui affirment que le Covid expose les femmes à un risque plus élevé de fausses couches.

Outre ces diagnostics, l'avocat est également revenu sur les problèmes neurologiques croissants, indiquant **une augmentation de plus de 1048 % des pathologies neurologiques** qui affectent les militaires, passant d'une moyenne de 82 000 par an à 863 000.

Par ailleurs, d'autres chiffres non mentionnés au cours de cette audience ont été confiés au sénateur Johnson, chiffres qu'il a indiqués dans sa lettre au Secrétaire de la défense Lloyd J Austin, le 1er février 2022.

Mais l'ensemble des pathologies ont été enregistrées par Thomas Renz dans un document qu'il met à disposition en ligne.

- Une augmentation de 2191% de l'hypertension
- Une augmentation de 894% des tumeurs malignes de l'œsophage
- Une augmentation du 680% de la sclérose en plaques
- Une augmentation de 624% des tumeurs des organes digestifs
- Une augmentation de 551% du syndrome de Guillain-Barré
- Une augmentation du cancer du sein de 487%
- Une augmentation de 487% des tumeurs démyélinisantes
- Une augmentation de 474% des tumeurs malignes des glandes endocrines

-Une augmentation de 472% de l'infertilité féminine  
-Une augmentation de 468 % des embolies pulmonaires  
-Une augmentation des migraines de 452%  
-Une augmentation du dysfonctionnement ovarien de 437%  
-Une augmentation du cancer des testicules de 369 %  
-Une augmentation de la tachycardie de 302 %  
-Une augmentation de 269 % des infarctus du myocarde  
-Une augmentation de 291 % des paralysies de Bell  
-Une augmentation de 156 % des pathologies congénitale des enfants de militaires

### ➤ **18 février 2022 : Australie - Vaccins & Nombre de Morts - Vaccins - Dangers** - « Australia: Another Country Where Covid Infections and Deaths Have Been Far Higher Since the Vaccine Rollout »

« What does the Australian experience teach us about the efficacy of Covid vaccines? Why, for instance, have infections and ICU admissions been hugely higher after vaccination campaigns really got under way? Australia hit 50% of the population double-vaccinated (meaning a much higher percentage of the adult population) on October 10th 2021, and 70% in mid-November. On October 10th our total Covid-related deaths were 1,448. On February 15th 2022, with 79% of the total population fully vaccinated, the total number of deaths was 4,726. So the number who died with Covid after we hit 50% vaccination is 2.3 times higher than the number before that point. »

➤ **18 février 2022 : USA - United Airlines - Vaccination Obligatoire - Justice - Convictions Religieuses - « Federal Court: United Airlines 'Actively Coercing Employees' »**

« A federal appeals court on Thursday ordered further review of United Airlines' coronavirus vaccine mandate, calling it “coercive” and reversing a lower court ruling.

A three-judge panel in the U.S. Court of Appeals for the Fifth Circuit ruled 2-1 to return the issue to District Judge Mark Pittman, who previously rejected employees' request for a preliminary injunction. In his opinion, Pittman was sympathetic to employees but said he was bound by court precedent, and he declined the request because employees could not prove “irreparable harm,” one of four variables which need to be satisfied in court in order for a judge to issue an injunction and preserve the “status quo” during litigation. Federal Judges Andy Oldham and Jennifer Elrod reversed Pittman's ruling, pointing to the “rather unique” nature of the case. »

- **19 février 2022 : Ivermectine - Remèdes - Étude JAMA - Malaisie - Biais Méthodologique - Vaccinés - Vaccins - Dangers - « Ivermectin: The Malaysia Study » - Swiss Policy Research**

**« The Malaysian ivermectin trial: what does it really show?**

**JAMA Internal Medicine has published the Malaysian I-TECH open-label randomized trial of ivermectin, comprising a total of 490 patients. The trial found no significant**

benefit of ivermectin regarding disease progression or death. But things are more complex than this.

On the **positive side**, the trial included mostly participants with an elevated risk of severe covid (50+ with comorbidities). **But on the negative side, 68% of the participants were already vaccinated (52% were double vaccinated), leaving only 159 unvaccinated participants. Moreover, treatment began on average 5.1 days after symptom onset, and mostly in patients already hospitalized.**

**Thus, most of these patients would not even have been eligible for the covid drug trials run by Pfizer (Paxlovid) and Merck (Molnupiravir), which required unvaccinated outpatients and a treatment delay of no more than 3 days (or 5 days at most), since swift action is crucial against a viral disease.**

To make matters worse, the primary endpoint of the Malaysian study was hypoxia (95% oxygen saturation), an endpoint that was reached on average already 8 days after symptom onset or just 3 days after start of treatment, i.e. before the treatment was even completed (5 days).

Thus, the study was “designed to fail”: “The study design was such that any other antiviral, such as Paxlovid or Molnupiravir [or monoclonal antibodies], would also have failed.”

Interestingly, if one considers the secondary endpoint of **28-day in-hospital mortality**, ivermectin once again showed an apparent benefit: 3 deaths (1.2%) vs 10 deaths (4.0%) overall and 1 death (1.3%) vs. 4 deaths (4.8%) in the unvaccinated subgroup, but the study was too small to reach statistical significance (risk ratio 0.31, p=0.09). Regarding ICU admission and ventilation, too, the ivermectin group showed a non-significant 20% to 60% advantage.

In addition, more people in the ivermectin group quickly progressed to hypoxia (21.6% vs. 17.3%; difference is not significant), which indicates that patients in the ivermectin group may have been in

worse shape to begin with (but, after treatment, showed rather lower mortality).

Thus, while many propagandists and weak analysts quickly jumped to a negative conclusion, the study is in fact consistent with previous high-quality RCTs that found a non-significant mortality benefit of up to 30% (i.e. 5 million prevented deaths globally). As professor David Boulware noted, this could also be due to an indirect effect (parasite hyperinfection due to steroid treatment).

**In conclusion**, it will be very interesting to see the results of the remaining high-quality ivermectin trials, and an updated meta-analysis of these trials, even though high vaccination rates and omicron (90% lower lethality) may increasingly impact results.

**Postscriptum:** The Malaysian trial data is not very positive with regards to vaccine protection: unadjusted death rates in fully vaccinated vs. unvaccinated participants were 3.8% (5 people) vs. 4.8% (4 people) in the control group and 1.6% (2) vs. 1.3% (1) in the ivermectin group. In other words, ivermectin had a bigger (unadjusted) impact on mortality than vaccination... »

« Myocarditis

Includes terms: Inflammatory Heart Reactions & Myocardial. Inflammation of the heart muscle (myocardium). The inflammation can reduce the heart's ability to pump and cause rapid or irregular heart rhythms (arrhythmias). Signs and symptoms of myocarditis include chest pain, fatigue, shortness of breath, and rapid or irregular heartbeats. In a small percentage of cases persons with myocarditis can

be at risk of sudden death following strenuous activity. Some sufferers of myocarditis may require heart surgery or a heart transplant later in life.

## Thrombosis

Includes terms: Thrombotic & Thromboembolic & Thromboembolism. There are three categories of causes of thrombosis: damage to the blood vessel (catheter or surgery), slowed blood flow (immobility), and/or thrombophilia (if the blood itself is more likely to clot).

1. Three cases of acute venous thromboembolism in women after vaccination against COVID-19: <https://www.sciencedirect.com/science/article/pii/S2213333X21003929>
2. Acute thrombosis of the coronary tree after vaccination against COVID-19: <https://www.sciencedirect.com/science/article/abs/pii/S1936879821003988>
3. US case reports of cerebral venous sinus thrombosis with thrombocytopenia after vaccination with Ad26.COV2.S (against covid-19), March 2 to April 21, 2020: <https://pubmed.ncbi.nlm.nih.gov/33929487/>
4. Portal vein thrombosis associated with ChAdOx1 nCov-19 vaccine: [https://www.thelancet.com/journals/langas/article/PIIS2468-1253\(21\)00197-7/](https://www.thelancet.com/journals/langas/article/PIIS2468-1253(21)00197-7/)
5. Management of cerebral and splanchnic vein thrombosis associated with thrombocytopenia in subjects previously vaccinated with Vaxzevria (AstraZeneca): position statement of the Italian Society for the Study of Hemostasis and Thrombosis (SISSET): <https://pubmed.ncbi.nlm.nih.gov/33871350/>
6. Thrombosis with thrombocytopenia syndrome associated with COVID-19 vaccines: <https://www.sciencedirect.com/science/article/abs/pii/S0735675721004381>
7. Covid-19 vaccine-induced thrombosis and thrombocytopenia: a commentary on an important and practical clinical

dilemma: <https://www.sciencedirect.com/science/article/abs/pii/S0033062021000505>

8. Thrombosis with thrombocytopenia syndrome associated with COVID-19 viral vector vaccines: <https://www.sciencedirect.com/science/article/abs/pii/S0953620521001904>
9. COVID-19 vaccine-induced immune-immune thrombotic thrombocytopenia: an emerging cause of splanchnic vein thrombosis: <https://www.sciencedirect.com/science/article/pii/S1665268121000557>
10. The roles of platelets in COVID-19-associated coagulopathy and vaccine-induced immune thrombotic immune thrombocytopenia (covid): <https://www.sciencedirect.com/science/article/pii/S1050173821000967>
11. Roots of autoimmunity of thrombotic events after COVID-19 vaccination: <https://www.sciencedirect.com/science/article/abs/pii/S1568997221002160>
12. Thrombotic immune thrombocytopenia induced by SARS-CoV-2 vaccine: <https://www.nejm.org/doi/full/10.1056/nejme2106315>
13. Thrombosis and thrombocytopenia after vaccination with ChAdOx1 nCoV-19: [https://www.nejm.org/doi/full/10.1056/NEJMoa2104882?query=recirc\\_curatedRelated\\_article](https://www.nejm.org/doi/full/10.1056/NEJMoa2104882?query=recirc_curatedRelated_article)
14. Thrombotic thrombocytopenia after vaccination with ChAdOx1 nCov-19: [https://www.nejm.org/doi/full/10.1056/NEJMoa2104840?query=recirc\\_curatedRelated\\_article](https://www.nejm.org/doi/full/10.1056/NEJMoa2104840?query=recirc_curatedRelated_article)
15. Post-mortem findings in vaccine-induced thrombotic thrombocytopenia (covid-19): <https://haematologica.org/article/view/haematol.2021.279075>
16. Comparison of vaccine-induced thrombotic episodes between ChAdOx1 nCoV-19 and Ad26.COV.2.S vaccines: <https://www.sciencedirect.com/science/article/abs/pii/S0896841121000895>

17. Hypothesis behind the very rare cases of thrombosis with thrombocytopenia syndrome after SARS-CoV-2 vaccination: <https://www.sciencedirect.com/science/article/abs/pii/S0049384821003315>
18. Primary adrenal insufficiency associated with thrombotic immune thrombocytopenia induced by the Oxford-AstraZeneca ChAdOx1 nCoV-19 vaccine (VITT): <https://www.sciencedirect.com/science/article/pii/S0953620521002363>
19. “Portal vein thrombosis occurring after the first dose of SARS-CoV-2 mRNA vaccine in a patient with antiphospholipid syndrome”: <https://www.sciencedirect.com/science/article/pii/S2666572721000389>
20. Early results of bivalirudin treatment for thrombotic thrombocytopenia and cerebral venous sinus thrombosis after vaccination with Ad26.COV2.S: <https://www.sciencedirect.com/science/article/pii/S0196064421003425>
21. Mechanisms of immunothrombosis in vaccine-induced thrombotic thrombocytopenia (VITT) compared to natural SARS-CoV-2 infection: <https://www.sciencedirect.com/science/article/abs/pii/S0896841121000706>

« Professor Mark Woolhouse is a member of SPI-M, the modelling group on SAGE, the group that advises the British government on lockdown measures.

SAGE has become notorious for consistently predicting doomsday COVID scenarios that never even come close to passing, such as last year's warning that Omicron could cause 6,000 deaths a day in the UK without harsher restrictions.

In a new book called *The Year the World Went Mad*, Woolhouse expresses regret at SAGE's involvement in pushing lockdown measures that caused huge devastation yet only served to delay the spread of the virus. »

➤ **22 février 2022 : SIDA & Covid - Médias - Vaccins - Dangers - Liens - Immunité - « What's Behind the New AIDS Scare? » - Joseph Mercola**

« We're looking at several big puzzle pieces here:

1. Prince Harry and others reminding everyone about the importance to get tested for HIV
2. U.K. and U.S. governments simultaneously promising to eradicate AIDS by 2030

3. The discovery of a new, more infectious and dangerous HIV strain
4. Emerging data suggesting the COVID jabs erode your immune function
5. The theoretical possibility that the COVID jab might raise people's risk of HIV infection, thus possibly triggering an avalanche of AIDS cases in the near future

Could the focus on HIV testing, especially in combination with the warning of a new HIV strain, be an effort to hide the fact that the COVID jabs are destroying people's immune function, and possibly promoting HIV infection? »

➤ **22 février 2022 : Inde - Pfizer - Vaccins - Demande d'Autorisation - Étude des Risques - Absence - Retrait - « Pfizer Withdraws EUA Application for COVID Shot in India After Regulator Asks for Independent Safety Study »**

« Pfizer, Inc. has withdrawn its emergency use authorization (EUA) application for its experimental BNT162b2 (also known as "Comirnaty") messenger RNA (mRNA) COVID-19 biologic (developed in collaboration with Germany's BioNTech) in India.<sup>1</sup>

Pfizer was the first pharmaceutical company to apply for an EUA to distribute a COVID biologic in India in 2021. However, India's regulatory agency approved two other COVID vaccines that are more cost effective: AstraZeneca/Oxford University's experimental AZD1222 vaccine and the locally-manufactured BBV152 ("Covaxin") vaccine by Bharat Biotech.<sup>2</sup>

During Pfizer's meeting with India's drug regulatory agency, the Central Drugs Standard Control Organization (CDSCO), the pharmaceutical decided to withdraw its application after the regulator requested a local trial on the vaccine's safety and immunogenicity specifically for Indians.<sup>3</sup>

After a meeting with Pfizer officials, CDSCO said, "After detailed deliberation, the committee has not recommended grant of permission for emergency use in the country at this stage." »

➤ **23 février 2022 : Remèdes - Traitements - Suppression - Guerre contre les Remèdes - Meryl Nass - « The Extraordinary Story of How Governments Suppressed Effective COVID Treatments and Targeted Physicians Who Prescribed Them » - Meryl Nass, M.D.**

« In 2020, I compiled a list of more than 50 ways authorities and pharma companies in multiple countries stopped the use of chloroquine drugs for COVID. This was (and is) a stunning collection, widely read and reproduced on many websites.

When you read it, you are astounded to learn that all the U.S. (and many international) public health agencies took many different actions that led to increased deaths and destruction from COVID and prolonged the pandemic.

“Avoiding the Trump drug” served as a great cover story. Taking hydroxychloroquine for COVID was equated to drinking bleach.

But here’s the kicker: The authorities knew all about chloroquine and other treatments for COVID-19 before there was a COVID-19 — because they had figured it out for the 2003 SARS epidemic and the 2012 MERS epidemic, both caused by related coronaviruses. But they hushed it up.

Five Centers for Disease Control and Prevention (CDC) U.S. scientists (employed by the U.S. government), along with

three Canadian government scientists, in 2005 published a papershowing chloroquine was an effective drug against SARS coronaviruses. European scientists showed the same thing in 2004.

The CDC paper concluded: “... chloroquine has strong antiviral effects on SARS-COV infection ... suggesting both prophylactic and therapeutic advantage.”

Chloroquine looked very promising for both prevention and treatment of the first SARS. After all, it has been used for many decades to prevent and treat malaria. (I took it for prevention, and later for treatment, 50 years ago).

Nine years later, in 2014, scientists at the National Institute of Allergy and Infectious Diseases (NIAID) – the agency run by Dr. Anthony Tony Fauci – published a study showing the same thing.

Moreover, the NIAID study revealed that not only did chloroquine work in vitro against the MERS coronavirus, but dozens of existing drugs, which could have been tested in patients as soon as the pandemic started, were also effective against SARS and MERS coronaviruses. »

➤ **23 février 2022 : Moderna - Plandémie - Brevet - Séquence ADN - Origine du Virus - Protéine Spike - « Fresh lab leak fears as study finds genetic code in Covid's spike protein linked to Moderna patent »**

- « Genetic match discovered in Covid's unique furin cleavage site on spike protein
- Matched genetic sequence patented by Moderna for cancer research purposes
- Researchers say one in 3trillion chance Covid developed the code naturally »

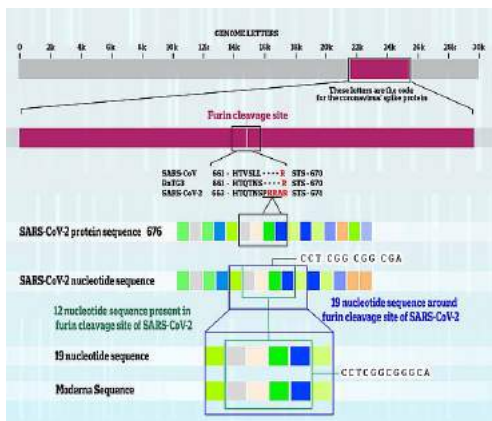

« It was discovered in SARS-CoV-2's unique furin cleavage site, the part that makes it so good at infecting people and separates it from other coronaviruses.

The structure has been one of the focal points of debate about the virus's origin, with some scientists claiming it could not have been acquired naturally.

The international team of researchers suggest the virus may have mutated to have a furin cleavage site during experiments on human cells in a lab.

They claim there is a one-in-three-trillion chance Moderna's sequence randomly appeared through natural evolution.

But there is some debate about whether the match is as rare as the study claims, with other experts describing it as a 'quirky' coincidence rather than a 'smoking gun'. »

➤ **23 février 2022 : Vaccins - Dangers - Étude - Revue Cell - Protéine Spike - « L'innocuité des vaccins à ARNm remise en cause » - FranceSoir**

« Une étude revue par les pairs et publiée dans la revue scientifique Cell, une revue scientifique internationale de haut niveau, révèle que l'antigène Spike produite par le vaccin et l'ARNm vaccinal persistent pendant deux mois dans les centres germinatifs des ganglions lymphatiques et que la production de protéines Spike est supérieure à celle des patients gravement malades atteints de COVID-19. **Cette étude remet totalement en cause l'innocuité des vaccins à base d'ARNm tels que ceux de Pfizer ou Moderna et pourrait expliquer les nombreux effets indésirables déclarés en pharmacovigilance (myocardites, thromboses etc) et faire craindre des effets indésirables à long terme.** Explications.

L'article publié le 24 janvier 2022 dans la revue Cell, est titré « *Empreinte immunitaire, étendue de la reconnaissance des variants et réponse du centre germinal dans l'infection et la vaccination par le SARS-CoV-2* » (« Immune imprinting, breadth of variant recognition, and germinal center response in human SARS-CoV-2 infection and vaccination »). »

- « La vaccination confère une liaison des IgG plus large sur les RBD des variants que l'infection par le SARS-CoV-2 ;
- L'empreinte des expositions initiales à l'antigène modifie les réponses IgG aux variants du virus ;
- L'histologie des ganglions lymphatiques vaccinés par l'ARNm montre de nombreux centres germinatifs ;

- L'antigène Spike produit par les vaccins et l'ARNm persistent pendant des semaines dans les centres germinatifs des ganglions lymphatiques. »

- **23 février 2022 : Vaccins - Dangers - Surmortalité 2021 - Scientifiques Allemands - « Surmortalité post-vaccinale: des scientifiques allemands sondent les statistiques officielles » - FranceSoir**

« Selon le professeur Riessinger, au cours de l'année 2020, qu'il nomme « *celle de l'étrange pandémie* », aucune surmortalité n'est observée, si l'on se base sur les chiffres officiels. En revanche, une surmortalité surgit en 2021, représentant entre 1,7 et 1,8 % de plus que la mortalité observée entre 2016 et 2020, soit entre 17 000 et 18 000 décès supplémentaires. La majorité de ces décès concernent des personnes entre 35 et 75 ans, alors que l'âge moyen de décès pour cause de Covid-19 est au-dessus de 75 ans.

C'est essentiellement au second semestre 2021 que l'on observe d'importantes variations. Une période corrélée avec le lancement de la campagne généralisée de vaccination. Lors du second semestre 2021, la surmortalité est de 4 % sur toute la population, et de 7 % pour la cohorte âgée entre 35 et 75 ans. Pour cette cohorte, sur les 14 000 décès excédentaires en 2021, 10 000 ont eu lieu durant le second semestre. Une tendance qui ne fait que s'accroître depuis septembre 2021. »

	Décès 1er semestre 2021	Moyenne 1er semestre 2016-2020	Surmortalité 1er semestre
0 - 35	4903	5262	-6,83%
35 - 75	146879	142936	2,76%
+ 75	298353	306966	-2,81%

	Décès 2e semestre 2021	Moyenne 2e semestre 2016-2020	Surmortalité 2e semestre
0 - 35	5195	5134	1,19%
35 - 75	147601	137901	7,03%
+ 75	417174	404714	3,08%

➤ **24 février 2022 : Allemagne - Assureur - Vaccins - Dangers - Données - « 400,000 Cases of COVID Vaccine Injuries Found in Data Analyzed by German Health Insurer »**

« A German health insurance company this week said an analysis of data collected from more than 10 million people suggests COVID vaccine side effects are “significantly” underreported.

The company, BKK ProVita (BKK), said its analysis revealed a “significant alarm signal” and that “a risk to human life cannot be ruled out.”

Based on the data collected, BKK said the number of vaccine side effects is many times higher than the number officially announced by

the Paul Ehrlich Institute (PEI), Germany's federal health agency that monitors the safety of vaccines and biomedicines.

The PEI announced in a press release there were 244,576 suspected cases of vaccine side effects reported in 2021 following COVID vaccination, but BKK said its analysis revealed more than 400,000 cases.

BKK board member Andreas Schöfbeck told WELT, a German news publication, "The numbers determined are significant and urgently need to be checked for plausibility." »

## **Transcription of Pfizer BioNTech COVID-19 mRNA Vaccine BNT162b2 In Vitro in Human Liver Cell Line » - MDPI**

« Preclinical studies of COVID-19 mRNA vaccine BNT162b2, developed by Pfizer and BioNTech, **showed reversible hepatic effects in animals that received the BNT162b2 injection. Furthermore, a recent study showed that SARS-CoV-2 RNA can be reverse-transcribed and integrated into the genome of human cells.** In this study, we investigated the effect of BNT162b2 on the human liver cell line Huh7 in vitro. Huh7 cells were exposed to BNT162b2, and quantitative PCR was performed on RNA extracted from the cells. We detected high levels of BNT162b2 in Huh7 cells and changes in gene expression of long interspersed nuclear element-1 (LINE-1), which is an endogenous reverse transcriptase. Immunohistochemistry using antibody binding to LINE-1 open reading frame-1 RNA-binding protein (ORFp1) on Huh7 cells treated with BNT162b2 indicated increased nucleus distribution of LINE-1. PCR on genomic DNA of Huh7 cells exposed to BNT162b2 amplified the DNA sequence unique to BNT162b2. Our results indicate a fast up-take of BNT162b2 into human liver cell line Huh7, leading to changes in LINE-1 expression and distribution. We also show that BNT162b2 mRNA is reverse transcribed intracellularly into DNA in as fast as 6 h upon BNT162b2 exposure. »

- **25 février 2022 : Remèdes - Ivermectine - Guerre contre les Remèdes - Médias - Industrie Pharmaceutique - Désinformation - Dr Pierre Kory - « The Global Disinformation Campaign to Suppress the Evidence of Efficacy of Ivermectin » - Pierre Kory**

« As one of the world's leading experts on the clinical use of ivermectin in covid-19, I feel that it is my personal responsibility to try to create a historical record of the myriad actions taken against ivermectin by the global vaccine and pharmaceutical industry due to ivermectin's long known and *now proven* role as the *single greatest solution* to the global pandemic.

All subsequent “Disinformation Campaign Against Ivermectin” posts should be understood in this vein. My previous post of my recent testimony in Senator Ron Johnson’s historic expert panel hearing detailed the incredible efficacy reported by the numerous health ministries around the world that deployed ivermectin in early treatment programs. Note that I did not even bother to detail the sixty-eight of seventy-seven controlled trials involving 86,000 patients from twenty-six countries (many of them prospective, double blind, randomized controlled trials) that collectively report massive reductions in infections, hospitalizations, and deaths, nor the dozen systematic reviews and meta-analyses (summary analyses of all the trials) that report the same. Nor did I present the analyses done after removing all the trials being attacked as low quality or “potentially fraudulent”—which actually found the signals of benefit *increased*.

I am tired of presenting the efficacy data. The “debate” of the efficacy of ivermectin has long ceased to be a “data argument,” despite the attempts to make it one by claiming the world over that it’s efficacy is “unproven” due to the *supposed fact* that these many dozens of trials are all low quality, small, and/or fraudulent. For sure, such assertions have successfully injected such doubt that the near entirety of academic medicine in nearly all the world’s countries have accepted it as scientific truth. These assertions can and should only be understood as a massive global propaganda and censorship campaign against the efficacy data. That is why I believe the only way forward is to expose each and every one of “their” disinformation tactics. If I am successful in doing this, it is my hope that this may begin to help end the decades-long war of the pharmaceutical industry against repurposed, generic medicines.

I feel the case of ivermectin may be a unique opportunity given that, in their pervasive war on numerous off-patent, effective therapies in dozens of disease models over decades, never has a single generic drug posed as large a threat to industry profit, nor have they ever committed such openly brazen and widespread criminalities using unprecedented levels of informational control. It is my belief and hope that their insane and relentless over-reach to protect profits in

the global pandemic, similar to Napoleon's foray into Russia, just may have opened an opportunity to so fully expose their deadly tactics that we can begin to counter them on a global scale. »

➤ **28 février 2022 : Vaccins - Dangers - Enfants - « mRNA shots raise the risk of Covid infection in children under 12 » - Alex Berenson**

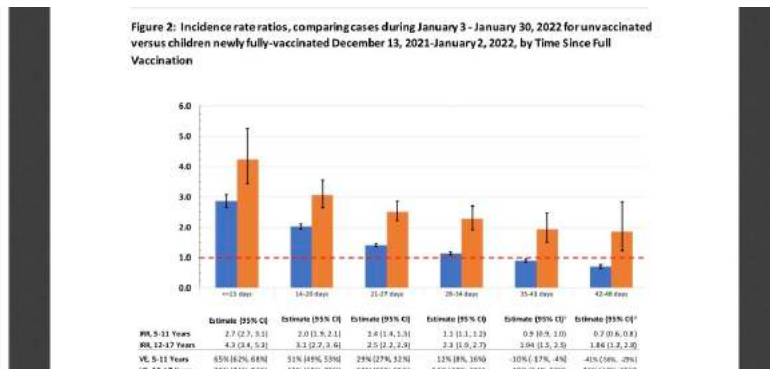

« Six weeks after becoming “fully vaccinated,” kids under 12 are 40 percent MORE likely to be infected Covid than those who never received mRNA shots, a huge New York state database shows.

The mRNA jabs provide some protection for the first two weeks of “full vaccination.” But it declines rapidly, turns negative by the fifth week, and more sharply negative in the sixth.

“Negative” vaccine efficacy means that vaccinated people are more likely to become infected. It is not clear how high the increased risk may become for young children, since the database only covered six weeks and the trend worsened each week.

The blue bar in the chart below shows the relative odds of unvaccinated and vaccinated children to get Covid. The dashed red line equals a risk ratio of 1 - a 50/50 risk.

See how the blue bar falls each week and drops below the red line after 35 days? At point, unvaccinated children have lower risk. (The orange bar is kids 12-17. They still have some protection six weeks out, although it too is declining.)

The study covered the period from mid-December through the end of January, when the Omicron variant became predominant. Although many other studies have shown the vaccines are largely useless against Omicron infection in adults after four months, this database makes clear they are even more useless even more quickly for children.

Children 5 to 11 receive a smaller mRNA dose than adolescents and adults, 10 micrograms versus 30 for each shot. It is not clear whether the smaller dose is the reason the shots are even less effective in kids than in adults, or whether children’s immune systems react differently to mRNA at any dose.

Vaccine protection against Covid hospitalization in children under 12 also dropped over time. By the final two weeks of the study, vaccines offered no statistically significant protection against hospitalizations from Covid, though the numbers were very small.

The database covered 365,000 vaccinated children in New York state aged 5-11. The researchers did not mention the negative effectiveness in their discussion of their findings. »

- **1<sup>er</sup> mars 2022 : Vaccins - Dangers - Comparaison avec le Covid - « COVID Jab Deadlier Than COVID for Anyone Under 80 » - Joseph Mercola**

« According to a cost-benefit analysis by Stephanie Seneff, Ph.D., and independent researcher Kathy Dopp, the COVID jab is deadlier than COVID-19 itself for anyone under the age of 80. The cost-benefit analysis<sup>1</sup> looked at publicly available official data from the U.S. and U.K. for all age groups, and compared all-cause mortality to the risk of dying from COVID-19.

“All age groups under 50 years old are at greater risk of fatality after receiving a COVID-19 inoculation than an unvaccinated person is at risk of a COVID-19 death,” Seneff and Dopp conclude. For younger adults and children, there’s no benefit, only risk.

*“This analysis is conservative,” the authors note, “because it ignores the fact that inoculation-induced adverse events such as thrombosis, myocarditis, Bell’s palsy, and other vaccine-induced injuries can lead to shortened life span.*

*When one takes into consideration the fact that there is approximately a 90% decrease in risk of COVID-19 death if early treatment is provided to all symptomatic high-risk persons, one can only conclude that mandates of COVID-19 inoculations are ill-advised.*

*Considering the emergence of antibody-resistant variants like Delta and Omicron, for most age groups COVID-19 vaccine inoculations result in higher death rates than COVID-19 does for the unvaccinated.”*

### **Real-Life Risk Reduction Is Negligible**

The analysis is also conservative in the sense that it only considers COVID job fatalities that occur within one month of injection. Looking at the U.S. Vaccine Adverse Events Reporting System (VAERS), we’re now seeing that many of those who are dying got the jab around April 2021 or earlier, so we know the shots can significantly cut your life short even if they don’t kill you in the first month. As detailed in Seneff’s and Dopp’s paper:

*“Absolute real-life risk reductions (ARRs) ... from COVID inoculations vary from a low of negative 0.00007% (an increased risk of a COVID death from inoculation) for children under age 18 to a positive 0.183% (0.00183) risk reduction of a COVID death for persons over age 80 ...*

*COVID vaccine inoculations increase risk of death and produce a net negative benefit, aka increased risk of death ... for all age groups younger than 60 years old. In other words, the COVID inoculations cause a net increase, rather than decrease, in the likelihood of death for all persons under 60 years old.*

*For those over 60 years old, the benefit of COVID inoculations is negligible, ranging from a 0.0016% reduction in likelihood of death for a 60- to 69-year-old persons to a 0.125% reduction in likelihood of death for those over 80 years old. Because preventative treatments are often given to well persons, a vaccine is supposed to provide very small risk compared to benefit.*

*Thus, such high fatality risks (VFRs) versus low benefit of risk reduction (ARRs) from the COVID inoculations are not acceptable, especially considering that low-cost, effective treatments are available that would additionally reduce COVID-19 death rates by as much as 90% or more if provided as soon as symptoms appear in high-risk persons.” »*

➤ **1<sup>er</sup> mars 2022 : Pfizer - Vaccins - Efficacité - Enfants - Étude - « Pfizer Vaccine Only 12% Effective in Kids 5 to 11, Study Says »**

« The effectiveness of the Pfizer-BioNTech COVID-19 vaccine against Omicron “declined rapidly for children, particularly those 5-11 years,” according to a study released February 28.

The authors of the study still recommended the vaccine for that age group, stating it was protective against severe disease. They also proposed the recommended dose for 5- to 11-year-olds was too small, suggesting a higher dose might solve the problem.

According to The New York Times, the study's lead author, Dr. Eli Rosenberg, briefed Dr. Rochelle Walensky and other officials at the Centers for Disease Control and Prevention (CDC) on the New York data in early February.

U.S. Food and Drug Administration (FDA) officials learned of the data around the same time.

Some scientists at those agencies then pushed for the data to be made public before an FDA meeting, scheduled for Feb. 15, to review Pfizer's application for Emergency Use Authorization of a three-dose regimen of its vaccine for infants and children 6 months to 5 years old. »

« All the results on micro clots in COVID and long COVID victims should be seen as holding for the same type clots in vaccinated people.

The work of **Dr. Sucharit Bhakdi** is critical. He has noted:

“immune and blood-related categories of risks from *vaccines*: (1) Clotting from the direct action of spike protein in the bloodstream; (2) Further clotting from the immune system attacking spike-producing endothelial cells.” This too was said: “The RNA injected into your body [from vaccines] are going to enter the cells that line blood vessels. He points to spiny spike protein that these cells will generate and protrude outwards to attract blood platelets and form micro-clots. Days after vaccination, white blood cells known as lymphocytes as well as antibodies will begin to mount an attack against these cells. If you dare to repeat this (get the second jab), “God help you” warns Dr Bhakdi.” He warned about the blood clot side-effects months before the roll-out of the mRNA vaccines.

**Canadian doctor blew the whistle about micro clots from vaccines**

Months ago in July 2021 a brave and smart Canadian doctor, **Charles Hoffe**, went public with his findings on COVID vaccinated patients. Using the d-dimer test of blood he found that 62% of hundreds of his vaccinated patients had high numbers

indicating the presence of micro blood clots. A d-dimer test measures the amount of degraded fibrin in the blood. »

- **6 mars 2022 : FDA - Pfizer - Vaccins - Dangers - Documents Officiels - « La FDA publie 10 000 documents supplémentaires sur les vaccins de Pfizer. Que révèlent-ils ? » - Par Michael Nevradakis**

« Le premier groupe de documents, produit en novembre 2021 et totalisant à peine 500 pages, a révélé des problèmes de sécurité et le fait que plus de 1 200 décès liés à des vaccins sont survenus dans les 90 premiers jours suivant la mise sur le marché du vaccin COVID de Pfizer-BioNTech.

Les documents ont également révélé une liste de neuf pages d'« effets indésirables observés au cours de cette même période. Cette liste a récemment été largement diffusée sur les médias sociaux et attribuée à tort à la série de documents publiés le 1er mars.

Cela peut s'expliquer par le fait que la publication des documents du 1er mars a attiré l'attention de tous ceux qui suivent le dossier, ce qui a probablement généré du trafic sur le site Web du PHMPT, qui répertorie tous les documents publiés à ce jour.

Les grands médias n'ont cependant pas couvert la dernière publication de documents et, à l'heure où nous écrivons ces lignes, la couverture par les petits médias a été restreinte. Cela peut être dû, du moins en partie, à l'énorme volume d'informations et de données à trier.

Endpoints News, une publication axée sur l'industrie pharmaceutique, a publié un article méprisant sur la publication de la dernière série de documents.

Le rédacteur en chef de la publication, Zachary Brennan, a déclaré que les documents contenaient des informations sans intérêt qui sont « caractéristiques de toute demande de médicament ou de vaccin » et qui « donneront aux lecteurs une bonne idée générale de la documentation nécessaire pour demander l'approbation d'un médicament ou d'un vaccin à la FDA ».

Ces informations comprennent, selon Brennan, « plus de 100 pages de tableaux de données anonymes sur la sécurité » et « le sexe, l'âge et le « BMC » de participants non identifiés ».

D'autres documents concernent « le paiement standard de près de 2,9 millions de dollars de frais d'utilisation à la FDA par Pfizer » et « l'aperçu non clinique confidentiel du vaccin », a déclaré Mme Brennan.

Mme Brennan a fait remarquer que certains documents inclus dans la série [cachette] de documents [confidentiels], tels que la lettre de désignation de la procédure accélérée et la demande de Pfizer pour une dérogation à l'ajout d'un suffixe au nom du vaccin, ne sont « généralement pas divulgués » au public.

Cependant, en dehors de ces informations relativement banales – qu'elles soient habituellement rendues publiques ou non – le dernier lot de documents peut contenir des informations supplémentaires révélatrices.

Un premier examen par The Defender des informations incluses dans ce vaste ensemble de documents nouvellement publiés comprend :

- Des détails concernant les études sur les animaux qui ont été menées, et leurs résultats.
- Des documents qui semblent se rapporter à des types spécifiques d'effets indésirables subis par les participants à l'essai et à des infections au COVID-19 chez les participants à l'essai après la vaccination.

- Des informations sur le protocole de l'étude, ainsi que sur les modifications qui ont été apportées à ce protocole.
- Des informations sur le comité de révision interne de Pfizer pour le vaccin COVID.
- La demande originale de Pfizer-BioNTech pour la commercialisation du vaccin COVID, soumise au Département américain de la santé et des services sociaux (HHS). »

➤ **7 mars 2022 : Médias - Mensonges - Pandémie - Echecs/Erreurs - Explications - « Don't believe the media's fake post-mortem, the "pandemic" was NOT a mistake - The story will be that Covid hysteria was the result of "flawed data" or "panic" ...it was neither » - Kit Knightly**

« As the mainstream media power down the pandemic narrative and engage war mode, there's still time for one last autopsy – the media's post mortem of the pandemic itself.

And, in a beautifully fitting piece of poetic irony, Covid's autopsy will be inaccurate and fitted to a foregone conclusion.

This week has seen the UK's SAGE group **discontinuing their regular monthly meetings**, whilst admitting their predictions were **"at variance with reality"**.

The media are discussing **the "bad data"** which was used to build the Imperial College models that called for a lockdown.

A Telegraph **article** quotes Prof Mark Woolhouse, who claims in his recent book that *"lockdowns had surprisingly little effect"*, and that *"Anyone who supported lockdown on the basis of the half-million figure was misled"* but still lays the blame at the feet of incompetence, never malice.

This is all still part of the story. The post-event navel-gazing. We've seen it before.

They said 9/11 was the result of a **“failure of imagination”**.

The Iraq War was supposedly the result of **“bad intelligence”**.

Both outright, provable lies. A protective rear-guard for the establishment narrative. »

➤ **7 mars 2022 : Pfizer - Vaccins - Dangers - Liste des Effets Secondaires - Document Officiel - « The Pfizer Vaccine Only Has 1,291 Side Effects! » - Emerald Robinson**

*« The FDA was forced by a judge to **release clinical data on the COVID vaccines back in January and so 55,000 pages of documents were just released.** The FDA had originally wanted to hide the data for 75 years and release it in 2096 because, of course, the FDA is basically engaged in a criminal conspiracy. The COVID vaccines should never have been approved. This was obvious from the very beginning when animal trials were skipped in the Trump Administration's ill-fated “Operation War Speed.” And now it's undeniably true. We have the clinical data, and it's horrific.*

Hiding out in one appendix is the clinical data for Pfizer's vaccine — which lists 1,291 adverse side effects in alphabetical order. Let's give you just the bad things that can happen to people who took the Pfizer vaccine that start with the letter “a” to enjoy:

1p36 deletion syndrome; 2-Hydroxyglutaric aciduria; 5'nucleotidase increased; Acoustic neuritis; Acquired C1 inhibitor deficiency; Acquired epidermolysis bullosa; Acquired epileptic aphasia; Acute cutaneous lupus erythematosus; Acute disseminated encephalomyelitis; Acute encephalitis with refractory, repetitive partial seizures; Acute febrile neutrophilic dermatosis; Acute flaccid myelitis; Acute haemorrhagic leukoencephalitis; Acute haemorrhagic oedema of infancy; Acute kidney injury; Acute macular outer retinopathy; Acute motor axonal neuropathy; Acute motor-sensory

➤ **7 mars 2022 : Masques - Inutilité - Étude - Catalogne - « Unravelling the Role of the Mandatory Use of Face Covering Masks for the Control of SARS-CoV-2 in Schools: A Quasi-Experimental Study Nested in a Population-Based Cohort in Catalonia (Spain) » - Ermengol Coma et autres**

« **Abstract**

Background: Mandatory use of face covering masks (FCM) had been established for children aged six and above in Catalonia (Spain), as one of the non-pharmaceutical interventions aimed at mitigating SARS-CoV-2 transmission within schools. To date, the effectiveness of this mandate has not been well established. The quasi-

experimental comparison between 5 year-old children, as a control group, and 6 year-old children, as an interventional group, provides us with the appropriate research conditions for addressing this issue.

Methods: We performed a retrospective population-based study among 599,314 children aged 3 to 11 years attending preschool (3-5 years, without FCM mandate) and primary education (6-11 years, with FCM mandate) with the aim of calculating the incidence of SARS-CoV-2, secondary attack rates (SAR) and the effective reproductive number ( $R^*$ ) for each grade during the first trimester of the 2021-2022 academic year, and analysing the differences between 5-year-old, without FCM, and 6 year-old children, with FCM.

Findings: SARS-CoV-2 incidence was significantly lower in preschool than in primary education, and an age-dependent trend was observed. Children aged 3 and 4 showed lower outcomes for all the analysed epidemiological variables, while children aged 11 had the higher values. Six-year-old children showed higher incidence than 5 year-olds (3.54% vs 3.1%; OR: 1.15 [95%CI: 1.08-1.22]) and slightly lower but not statistically significant SAR and  $R^*$ : SAR were 4.36% in 6 year-old children, and 4.59% in 5 year-old (IRR: 0.96 [95%CI: 0.82-1.11]); and  $R^*$  was 0.9 and 0.93 (OR: 0.96 [95%CI: 0.87-1.09]), respectively.

**Interpretation: FCM mandates in schools were not associated with lower SARS-CoV-2 incidence or transmission, suggesting that this intervention was not effective. Instead, age-dependency was the most important factor in explaining the transmission risk for children attending school. »**

➤ **8 mars 2022 : Pfizer - Vaccins - Dangers - ARN - Retro-Transcription - Étude - « Retro-transcription de l'ARNm du vaccin Pfizer/BioNtech : un début de preuve in vitro » - Reinfocovid.fr**

« A retenir

- **L'ARNm du vaccin Pfizer peut être rétro-transcrit en ADN *in vitro*.**
- **L'ARN du Sars-CoV-2 peut s'intégrer dans le génome de cultures cellulaires humaines *in vitro*.**

**Des ARNm, même étrangers et même artificiels peuvent être rétro-transcrits dans des cellules humaines en l'absence de tout virus.**

**Peut-être une piste de compréhension de cas d'hépatites auto-immunes à la suite de la vaccination anti-COVID-19 Pfizer » (...)**

« Plus récemment, **un article** paru dans les comptes rendus de l'académie des sciences américaine (PNAS) en mai 2021 **montrait déjà *in vitro* que l'ARN du Sars-CoV-2 lui-même pouvait s'intégrer dans le génome de culture cellulaire humaine et donc avait été rétro-transcrit en ADN.** Un rétrotransposon, nommé LINE-1, était soupçonné d'être à l'origine de cette rétrotranscription et intégration dans le génome humain [2]. Nous en avons proposé une synthèse à l'époque [3]

**Une nouvelle preuve est apportée par un article montrant que l'ARNm du vaccin Pfizer (pourtant dépourvu de rétrotranscriptase virale) peut être rétro-transcrit en ADN et que cet ADN est détectable dès 6h après l'ajout du vaccin dans les cultures cellulaires [4].**

Cet article a testé des concentrations de vaccins similaires à celles anticipées *in vivo* dans le foie des personnes injectées sur des cultures cellulaires de cellules de foie cancéreuses. En effet, **l'ARNm du vaccin ne « reste » pas au site d'injection mais se**

**distribue dans une grande variété d'organes** (dont le foie et les organes reproducteurs) comme nous l'avions déjà souligné dans un article précédent [5].

**Cet article vient donc réaffirmer que des ARNm, même étrangers et même artificiels peuvent être rétro-transcrits dans des cellules humaines en l'absence de tout virus. »**

Autre article :

**« Qui a modifié les conclusions scientifiques d'un article qui aurait pu sauver des millions de personnes ? » - Covidhub.ch**

*« Il s'agit d'un scandale aux proportions immenses qui justifie une enquête immédiate » résume la Front Line COVID-19 Critical Care Alliance au sujet des conclusions insensées du Dr Andrew Hill dans un rapport aux lourdes conséquences. Comment ce chercheur de l'Université de Liverpool en est-il venu à noyer le poisson ? La FLCCC déballe toute l'affaire dans une série d'articles et une vidéo'. »*

« Tout d'abord, posons le décor :

- Il y a plus d'un an, de nombreux essais contrôlés randomisés et évalués par des pairs ont fourni des preuves solides de l'efficacité de l'ivermectine comme traitement du COVID dans toutes les phases de la maladie.
- Un document prenant en compte ces nombreuses études a été rédigé par l'auteur principal, le Dr Andrew Hill, de l'Université de Liverpool, pour le groupe de développement des directives COVID de l'Organisation mondiale de la santé. Hill a été l'un des premiers et des plus ardents défenseurs de l'ivermectine. Son article montrait que l'ivermectine pouvait réduire les décès de 75 % si elle était utilisée dans le monde entier.
- Inexplicablement, quelques jours avant sa publication, l'article est apparu sur un serveur de pré-impression, avec des conclusions modifiées. Au lieu de conclure que l'ivermectine – l'un des médicaments les plus sûrs et les moins chers au monde – devrait être déployée à l'échelle mondiale, l'article concluait que des études supplémentaires sur l'ivermectine étaient nécessaires avant de pouvoir la recommander à l'échelle mondiale. Compte tenu de la totalité des données

scientifiques probantes concernant l'ivermectine, il s'agit d'un revirement stupéfiant, voire choquant, de la part du Dr Hill. »

<https://www.covidhub.ch/qui-a-modifie-les-conclusions-scientifiques-dun-article-qui-aurait-pu-sauver-des-millions-de-personnes/>

- **9 mars 2022 : UK - Infections & Vaccination - Vaccins - Dangers - Inefficacité - « Covid infections in Britain are rising again, and 90 percent of the dead are vaccinated. Have mRNA jabs ruined our chance at herd immunity? » - Alex Berenson**

« New figures from Britain raise bright red flags about the direction of Covid in wealthy countries that used mRNA and DNA shots to attempt to defeat the coronavirus last year.

**Hospitalizations and deaths remain stubbornly high and overwhelmingly occur in vaccinated people. In February, 90 percent of the 1,000 Britons who died each week of Covid were vaccinated.**

**New infections are not only far higher than they were before the Omicron variant emerged, they are rising again after a brief fall in February.** And even boosters appear to offer no protection against hospitalizations in younger people.

**British data are crucial both because Britain vaccinated and boosted early and because its datasets are far more complete and less politicized than those in the United States.**

**Day by day, week by week, the figures are becoming more worrisome. They hint that mRNA and DNA shots may have slowed if not completely halted the natural progression to herd immunity that occurred in earlier respiratory virus epidemics.**

**In fact, Britain now reports 99 percent of adults have antibodies to Covid, mostly as the result of vaccination. That level is far higher than epidemiologists believed would**

be necessary to support herd immunity. Yet Covid infections, hospitalizations, and deaths continue unabated. Almost 12,000 Britons are now hospitalized with Covid, more than at this time last year.

The most stunning chart is this one. Each week the British government releases a “surveillance report” which includes Covid deaths by vaccine status. »

COVID-19 vaccine surveillance report - week 9

Table 12. COVID-19 deaths (a) within 28 days and (b) within 60 days of positive specimen or with COVID-19 reported on death certificate, by vaccination status between week 5 2022 and week 8 2022. Please note that corresponding rates by vaccination status can be found in Table 13.

(b)

Death within 28 days of positive COVID-19 test by date of death between week 5 2022 (week 6 February 2022) and week 8 2022 (week 27 February 2022)	Total**	Unlinked*	Not vaccinated	Received one dose (1 to 28 days before specimen date)	Received one dose, 29 to 31 days before specimen date	Second dose 21 to 28 days before specimen date†	Third dose ≥14 days before specimen date‡
	[This data should be interpreted with caution. See information below in footnote about the correct interpretation of these figures]						
Under 18	4	0	3	0	1	0	0
18 to 29	10	0	3	0	1	4	2
30 to 39	27	1	11	0	1	8	6
40 to 49	73	2	21	1	6	24	19
50 to 59	172	3	45	1	15	43	65
60 to 69	352	3	48	0	15	78	209
70 to 79	827	5	96	0	22	155	549
80 or over	2,491	4	170	0	50	413	1,854

\* Individuals whose 10 ID numbers were unavailable to link to the NHS.  
 \*\* Number of deaths of people who had a positive test result for COVID-19 and either died within 60 days of the first positive test or have COVID-19 mentioned on their death certificate.  
 † In the context of very high vaccine coverage in the population, even with a highly effective vaccine, it is expected that a large proportion of cases, hospitalizations and deaths would occur in vaccinated individuals, simply because a larger proportion of the population are vaccinated than unvaccinated and no vaccine is 100% effective. This is especially true because vaccination has been prioritised in individuals who are more susceptible or more at risk of severe disease. Individuals at risk groups may also be more at risk of hospitalization or death due to non-COVID-19 causes, and thus may be hospitalized or die with COVID-19 rather than because of COVID-19.

➤ **Mars 2022 : Covid-19 - Une Synthèse** - « Facts about Covid » - Swiss Policy Research

« Overview »

1. **Lethality:** The overall infection fatality rate (IFR) of the novel coronavirus in the general population (excluding

nursing homes) is [about 0.3% to 0.5%](#) in most countries, which is most closely [comparable to](#) the medium influenza pandemics of 1936, 1957 and 1968.

2. **Age profile:** The median age of covid deaths is [over 80 years](#) in most Western countries (78 in the United States) and [about 5%](#) of the deceased had no medical preconditions. In many Western countries, [about 50%](#) of all covid deaths occurred in nursing homes.
3. **Vaccine protection:** Covid vaccines provide a very high, but [rapidly declining](#) protection against severe disease. Vaccination [cannot prevent](#) infection and transmission. A prior infection generally confers [superior immunity](#) compared to vaccination (in part due to mucosal immunity).
4. **Vaccine injuries:** Covid vaccinations can cause severe and fatal [vaccine reactions](#), including cardiovascular, neurological and immunological reactions. Because of this, the risk-benefit ratio of covid vaccination in healthy children and adults under [40 years of age](#) remains controversial.
5. **Excess mortality:** In most countries, the pandemic increased mortality by about [5% to 25%](#). Some of the additional deaths were caused not by covid, but by [indirect effects](#) of the pandemic and lockdowns (including an increase in [drug overdose](#) deaths).
6. **Symptoms:** About 30% of all infected persons [show no symptoms](#). Overall, [about 95%](#) of all people develop at most mild or moderate symptoms and do not require hospitalization. Obesity, in particular, is a [major risk factor](#) for severe covid.
7. **Treatment:** For people at high risk or high exposure, [early or prophylactic treatment](#) is essential to prevent progression of the disease. Numerous studies found that early outpatient treatment of covid can significantly reduce hospitalizations and deaths.

8. **Long covid:** Up to 10% of symptomatic people experience [post-acute or long covid](#), i.e. covid-related symptoms that last several weeks or months. Long covid may also affect young and previously healthy people whose initial course of disease was rather mild.
9. **Transmission:** Indoor aerosols appear to be the [main route of transmission](#) of the coronavirus, while outdoor aerosols, droplets, as well as most object surfaces appear to play [a minor role](#).
10. **Masks:** Face masks had [no influence](#) on infection rates, which was already known from studies [prior to the pandemic](#). Even N95 masks had [no influence](#) on infection rates in the general population. Moreover, long-term or improper use of face masks can lead to [health issues](#).
11. **Lockdowns:** In contrast to [early border controls](#), lockdowns had [no significant effect](#) on infection rates. However, according to the World Bank lockdowns caused an “historically unprecedented increase in global poverty” of close to [100 million people](#).
12. **Children and schools:** In contrast to influenza, the risk of severe covid in children is [rather low](#). Moreover, children were not drivers of the pandemic and the closure of schools [had no impact](#) on infection rates in the general population.
13. **PCR tests:** The highly sensitive PCR tests are [prone to producing](#) false positive or false negative results (e.g. after an acute infection). Overall, PCR and antigen mass testing had [no impact](#) on infection rates in the general population (exception: to sustain border controls).
14. **Contact tracing:** Manual contact tracing and contact tracing apps on mobile phones [had no effect](#) on infection rates. Already in 2019, a WHO study on influenza pandemics concluded that contact tracing is [“not recommended in any circumstances”](#).

15. **Vaccine passports:** Vaccine passports had no impact on infection rates as vaccination cannot prevent infection. Vaccine passports could, however, serve as a basis for the introduction of digital biometric identity and payment systems. NSA whistleblower Edward Snowden warned as early as March 2020 that surveillance could be expanded during the pandemic.
16. **Virus mutations:** Similar to influenza viruses, mutations occur frequently in coronaviruses. The omicron variant, which may have emerged from vaccine research, showed significantly higher infectiousness and immune escape, but 90% lower lethality.
17. **Sweden:** In Sweden, covid mortality without lockdown was comparable to a strong influenza season and somewhat below the EU average. About 50% of Swedish deaths occurred in nursing homes and the median age of Swedish covid deaths was about 84 years.
18. **Influenza viruses:** Influenza viruses largely disappeared during the coronavirus pandemic. Yet this was not a result of “covid measures”, but a result of temporary displacement by the novel coronavirus, even in countries without measures (such as Sweden).
19. **Media:** The reporting of many media was rather unprofessional, increased fear and panic in the population and led to a hundredfold overestimation of the lethality of the coronavirus. Some media even used manipulative pictures and videos to dramatize the situation.
20. **Virus origin:** Genetic evidence points to a laboratory origin of the new coronavirus. Both the Virological Institute in Wuhan (WIV) as well as some US laboratories that cooperated with the WIV performed various kinds of research on similar coronaviruses. »
